#### B.E. INSTRUMENTATION AND CONTROL ENGINEERING

#### II - VIII SEMESTERS CURRICULA AND SYLLABI

#### SEMESTER II

SL. No.	COURSE CODE	COURSE TITLE	L	T	P	C
<b>THEORY</b>						
1.	HS2161	<u>Technical English – II*</u>	3	1	0	4
2.	MA2161	<u>Mathematics – II*</u>	3	1	0	4
3.	PH2161	<u>Engineering Physics – II*</u>	3	0	0	3
4.	CY2161	<u>Engineering Chemistry – II*</u>	3	0	0	3
5. a	ME2151	<u>Engineering Mechanics</u> <b>(For non-circuit branches)</b>	3	1	0	4
5. b	EE2151	<u>Circuit Theory</u> <b>(For branches under Electrical Faculty)</b>	3	1	0	4
5. c	EC2151	<u>Electric Circuits and Electron Devices</u> <b>(For branches under I &amp; C Faculty)</b>	3	1	0	4
6. a	GE2151	<u>Basic Electrical &amp; Electronics Engineering</u> <b>(For non-circuit branches)</b>	4	0	0	4
6. b	GE2152	<u>Basic Civil &amp; Mechanical Engineering</u> <b>(For circuit branches)</b>	4	0	0	4
<b>PRACTICAL</b>						
7.	GE2155	<u>Computer Practice Laboratory-II*</u>	0	1	2	2
8.	GS2165	<u>Physics &amp; Chemistry Laboratory - II*</u>	0	0	3	2
9. a	ME2155	<u>Computer Aided Drafting and Modeling Laboratory</u> <b>(For non-circuits branches)</b>	0	1	2	2
9. b	EE2155	<u>Electrical Circuits Laboratory</u> <b>(For branches under Electrical Faculty)</b>	0	0	3	2
9. c	EC2155	<u>Circuits and Devices Laboratory</u> <b>(For branches under I &amp; C Faculty)</b>	0	0	3	2
<b>TOTAL : 28 CREDITS</b>						
10.	-	<u>English Language Laboratory</u> <sup>+</sup>	0	0	2	-

\* Common to all B.E. / B.Tech. Programmes

+ Offering English Language Laboratory as an additional subject (with no marks) during 2<sup>nd</sup> semester may be decided by the respective Colleges affiliated to Anna University Chennai.

### **A. CIRCUIT BRANCHES**

#### **I Faculty of Electrical Engineering**

1. B.E. Electrical and Electronics Engineering
2. B.E. Electronics and Instrumentation Engineering
3. B.E. Instrumentation and Control Engineering

#### **II Faculty of Information and Communication Engineering**

1. B.E. Computer Science and Engineering
2. B.E. Electronics and Communication Engineering
3. B.E. Bio Medical Engineering
4. B.Tech. Information Technology

### **B. NON – CIRCUIT BRANCHES**

#### **I Faculty of Civil Engineering**

1. B.E. Civil Engineering

#### **II Faculty of Mechanical Engineering**

1. B.E. Aeronautical Engineering
2. B.E. Automobile Engineering
3. B.E. Marine Engineering
4. B.E. Mechanical Engineering
5. B.E. Production Engineering

#### **III Faculty of Technology**

1. B.Tech. Chemical Engineering
2. B.Tech. Biotechnology
3. B.Tech. Polymer Technology
4. B.Tech. Textile Technology
5. B.Tech. Textile Technology (Fashion Technology)
6. B.Tech. Petroleum Engineering
7. B.Tech. Plastics Technology

### SEMESTER III

(Applicable to the students admitted from the Academic year 2008 – 2009 onwards)

THEORY			L	T	P	C
1.	MA 2211	<u>Transforms and Partial Differential Equations</u>	3	1	0	4
2.	GE 2021	<u>Environmental Science and Engineering</u>	3	0	0	3
3.	EI 2201	<u>Electrical Machines</u>	<b>3</b>	<b>1</b>	<b>0</b>	<b>4</b>
4.	EI 2203	<u>Electronic Devices and Circuits</u>	3	0	0	3
5.	EE2204	<u>Data Structures and Algorithms</u>	<b>3</b>	<b>1</b>	<b>0</b>	<b>4</b>
6.	EI 2202	<u>Electrical Measurements</u>	<b>3</b>	<b>1</b>	<b>0</b>	<b>4</b>
PRACTICAL						
1.	EE2207	<b><u>Electron Devices and Circuits Laboratory</u></b>	0	0	3	2
2.	<b>EI2208</b>	<u>Electrical Machines Laboratory</u>	0	0	3	2
3.	EE2209	<u>Data Structures and Algorithms Laboratory</u>	0	0	3	2
<b>TOTAL</b>			<b>18</b>	<b>4</b>	<b>9</b>	<b>28</b>

### SEMESTER IV

(Applicable to the students admitted from the Academic year 2008 – 2009 onwards)

THEORY			L	T	P	C
1.	EE 2253	<u>Control Systems</u>	3	1	0	4
2.	EI 2252	<u>Transducer Engineering</u>	3	0	0	3
3.	IC 2251	<u>Digital Principles and Design</u>	3	0	0	3
4.	EE 2254	<u>Linear Integrated Circuits and Applications</u>	3	0	0	3
5.	EI 2251	<u>Industrial Instrumentation - I</u>	3	0	0	3
6.	EI 2254	<u>Applied Thermodynamics</u>	3	1	0	4
PRACTICAL						
1.	EI 2257	<u>Transducers and Measurements Laboratory</u>	0	0	3	2
2.	EE 2258	<u>Linear and Digital Integrated Laboratory</u>	0	0	3	2
3.	EI 2258	<u>Thermodynamics Laboratory</u>	0	0	3	2
<b>TOTAL</b>			<b>18</b>	<b>2</b>	<b>9</b>	<b>26</b>

### SEMESTER V

(Applicable to the students admitted from the Academic year 2008 – 2009 onwards)

SL. No.	COURSE CODE	COURSE TITLE	L	T	P	C
THEORY						
1.	EC2312	<u>Microprocessor and Microcontroller</u>	3	0	0	3
2.	CS2311	<u>Object Oriented Programming</u>	3	0	0	3
3.	EI2302	<u>Analytical Instruments</u>	3	0	0	3
4.	EI2303	<u>Industrial Instrumentation – II</u>	3	0	0	3
5.	EE2301	<u>Power Electronics</u>	3	0	0	3
6.	EI2311	<u>Biomedical Instrumentation</u>	3	0	0	3
PRACTICAL						
1.	EC2313	<u>Microprocessor and Microcontroller Lab</u>	0	0	3	2
2.	CS2312	<u>Object Oriented Programming Laboratory</u>	0	0	3	2
3.	GE2321	<u>Communication Skills Laboratory</u>	0	0	4	2
4.	EI2304	<u>Industrial Instrumentation Laboratory</u>	0	0	3	2
<b>TOTAL</b>			<b>18</b>	<b>0</b>	<b>13</b>	<b>26</b>

## SEMESTER VI

(Applicable to the students admitted from the Academic year 2008 – 2009 onwards)

SL. No.	COURSE CODE	COURSE TITLE	L	T	P	C
<b>THEORY</b>						
1.	EI2351	<u>Modern Electronic Instrumentation</u>	3	0	0	3
2.	EI2352	<u>Process Control</u>	3	1	0	4
3.	EI2404	<u>Fiber Optics and Laser Instruments</u>	3	0	0	3
4.	IC2351	<u>Advanced Control System</u>	3	0	0	3
5.	EC2361	<u>Digital Signal Processing</u>	3	1	0	4
6.	CS2364	<u>Embedded System</u>	3	0	0	3
<b>PRACTICAL</b>						
1.	IC2352	<u>Control System Laboratory</u>	0	0	3	2
2.	EI2356	<u>Process Control System Laboratory</u>	0	0	3	2
3.	EI2357	<u>Virtual Instrumentation Lab</u>	0	0	3	2
<b>TOTAL</b>			<b>18</b>	<b>2</b>	<b>9</b>	<b>26</b>

## SEMESTER VII

(Applicable to the students admitted from the Academic year 2008 – 2009 onwards)

SL. No.	COURSE CODE	COURSE TITLE	L	T	P	C
<b>THEORY</b>						
1.	IC2401	<u>Digital Control System</u>	3	0	0	3

13.	GE2025	<u>Professional Ethics in Engineering</u>	3	0	0	3
14.	EI2403	<u>VLSI Design</u>	3	0	0	3
15.	EC2057	<u>Advanced Digital Signal Processing</u>	3	0	0	3

**AIM:**

To encourage students to actively involve in participative learning of English and to help them acquire Communication Skills.

**OBJECTIVES:**

1. To help students develop listening skills for academic and professional purposes.
2. To help students acquire the ability to speak effectively in English in real-life situations.
3. To inculcate reading habit and to develop effective reading skills.
4. To help students improve their active and passive vocabulary.
5. To familiarize students with different rhetorical functions of scientific English.
6. To enable students write letters and reports effectively in formal and business situations.

**UNIT I****12**

Technical Vocabulary - meanings in context, sequencing words, Articles- Prepositions, intensive reading& predicting content, Reading and interpretation, extended definitions, Process description

**SUGGESTED ACTIVITIES:**

1. Exercises on word formation using the prefix 'self' - Gap filling with preposition.
2. Exercises - Using sequence words.
3. Reading comprehension exercise with questions based on inference – Reading headings
4. and predicting the content – Reading advertisements and interpretation.
5. Writing extended definitions – Writing descriptions of processes – Writing paragraphs based on discussions – Writing paragraphs describing the future.

**UNIT II****12**

Phrases / Structures indicating use / purpose – Adverbs-Skimming – Non-verbal communication - Listening – correlating verbal and non-verbal communication -Speaking in group discussions – Formal Letter writing – Writing analytical paragraphs.

**SUGGESTED ACTIVITIES:**

Reading comprehension exercises with questions on overall content – Discussions analyzing stylistic features (creative and factual description) - Reading comprehension exercises with texts including graphic communication - Exercises in interpreting non-verbal communication.

1. Listening comprehension exercises to categorise data in tables.
2. Writing formal letters, quotations, clarification, complaint – Letter seeking permission for Industrial visits– Writing analytical paragraphs on different debatable issues.

**UNIT III****12**

Cause and effect expressions – Different grammatical forms of the same word - Speaking – stress and intonation, Group Discussions - Reading – Critical reading - Listening, - Writing – using connectives, report writing – types, structure, data collection, content, form, recommendations .

**SUGGESTED ACTIVITIES:**

Exercises combining sentences using cause and effect expressions – Gap filling exercises using the appropriate tense forms – Making sentences using different grammatical forms of the same word. ( Eg: object –verb / object – noun )

1. Speaking exercises involving the use of stress and intonation – Group discussions– analysis of problems and offering solutions.
2. Reading comprehension exercises with critical questions, Multiple choice question.
3. Sequencing of jumbled sentences using connectives – Writing different types of reports like industrial accident report and survey report – Writing recommendations.

**UNIT IV****12**

Numerical adjectives – Oral instructions – Descriptive writing – Argumentative paragraphs – Letter of application - content, format (CV / Bio-data) - Instructions, imperative forms - Checklists, Yes/No question form – E-mail communication.

**SUGGESTED ACTIVITIES:**

1. Rewriting exercises using numerical adjectives.
2. Reading comprehension exercises with analytical questions on content – Evaluation of content.
3. Listening comprehension – entering information in tabular form, intensive listening exercise and completing the steps of a process.
4. Speaking - Role play – group discussions – Activities giving oral instructions.
5. Writing descriptions, expanding hints – Writing argumentative paragraphs – Writing formal letters – Writing letter of application with CV/Bio-data – Writing general and safety instructions – Preparing checklists – Writing e-mail messages.

**UNIT V****9**

Speaking - Discussion of Problems and solutions - Creative and critical thinking – Writing an essay, Writing a proposal.

**SUGGESTED ACTIVITIES:**

1. Case Studies on problems and solutions
2. Brain storming and discussion
3. Writing Critical essays
4. Writing short proposals of 2 pages for starting a project, solving problems, etc.
5. Writing advertisements.

**TOTAL : 60 PERIODS****TEXT BOOK:**

1. Chapters 5 – 8. Department of Humanities & Social Sciences, Anna University, 'English for Engineers and Technologists' Combined Edition (Volumes 1 & 2), Chennai: Orient Longman Pvt. Ltd., 2006. Themes 5 – 8 (Technology, Communication, Environment, Industry)

2. Krishna Mohan and Meera Banerjee, 'Developing Communication Skills', Macmillan India Ltd., (Reprinted 1994 – 2007).
3. Edgar Thorpe, Showick Thorpe, 'Objective English', Second Edition, Pearson Education, 2007.

**EXTENSIVE READING:**

1. Robin Sharma, 'The Monk Who Sold His Ferrari', Jaico Publishing House, 2007

**Note:**

The book listed under Extensive Reading is meant for inculcating the reading habit of the students. They need not be used for testing purposes.

**MA2161****MATHEMATICS – II****L T P C**  
**3 1 0 4****UNIT I            ORDINARY DIFFERENTIAL EQUATIONS            12**

Higher order linear differential equations with constant coefficients – Method of variation of parameters – Cauchy's and Legendre's linear equations – Simultaneous first order linear equations with constant coefficients.

**UNIT II            VECTOR CALCULUS            12**

Gradient Divergence and Curl – Directional derivative – Irrotational and solenoidal vector fields – Vector integration – Green's theorem in a plane, Gauss divergence theorem and Stokes' theorem (excluding proofs) – Simple applications involving cubes and rectangular parallelepipeds.

**UNIT III           ANALYTIC FUNCTIONS            12**

Functions of a complex variable – Analytic functions – Necessary conditions, Cauchy – Riemann equation and Sufficient conditions (excluding proofs) – Harmonic and orthogonal properties of analytic function – Harmonic conjugate – Construction of analytic functions – Conformal mapping :  $w = z+c$ ,  $cz$ ,  $1/z$ , and bilinear transformation.

**UNIT IV           COMPLEX INTEGRATION            12**

Complex integration – Statement and applications of Cauchy's integral theorem and Cauchy's integral formula – Taylor and Laurent expansions – Singular points – Residues – Residue theorem – Application of residue theorem to evaluate real integrals – Unit circle and semi-circular contour(excluding poles on boundaries).

**UNIT V            LAPLACE TRANSFORM            12**

Laplace transform – Conditions for existence – Transform of elementary functions – Basic properties – Transform of derivatives and integrals – Transform of unit step function and impulse functions – Transform of periodic functions.

Definition of Inverse Laplace transform as contour integral – Convolution theorem (excluding proof) – Initial and Final value theorems – Solution of linear ODE of second order with constant coefficients using Laplace transformation techniques.

**TOTAL : 60 PERIODS****TEXT BOOK:**

**PH2161****ENGINEERING PHYSICS – II****L T P C  
3 0 0 3****UNIT I CONDUCTING MATERIALS****9**

Conductors – classical free electron theory of metals – Electrical and thermal conductivity – Wiedemann – Franz law – Lorentz number – Draw backs of classical theory – Quantum theory – Fermi distribution function – Effect of temperature on Fermi Function – Density of energy states – carrier concentration in metals.

**UNIT II SEMICONDUCTING MATERIALS****9**

Intrinsic semiconductor – carrier concentration derivation – Fermi level – Variation of Fermi level with temperature – electrical conductivity – band gap determination – extrinsic semiconductors – carrier concentration derivation in n-type and p-type semiconductor – variation of Fermi level with temperature and impurity concentration – compound semiconductors – Hall effect – Determination of Hall coefficient – Applications.

**UNIT III MAGNETIC AND SUPERCONDUCTING MATERIALS****9**

Origin of magnetic moment – Bohr magneton – Dia and para magnetism – Ferro magnetism – Domain theory – Hysteresis – soft and hard magnetic materials – anti – ferromagnetic materials – Ferrites – applications – magnetic recording and readout – storage of magnetic data – tapes, floppy and magnetic disc drives.

Superconductivity : properties - Types of super conductors – BCS theory of superconductivity (Qualitative) - High T<sub>c</sub> superconductors – Applications of superconductors – SQUID, cryotron, magnetic levitation.

**UNIT IV DIELECTRIC MATERIALS****9**

Electrical susceptibility – dielectric constant – electronic, ionic, orientational and space charge polarization – frequency and temperature dependence of polarisation – internal field – Clausius – Mosotti relation (derivation) – dielectric loss – dielectric breakdown – uses of dielectric materials (capacitor and transformer) – ferroelectricity and applications.

**UNIT V MODERN ENGINEERING MATERIALS****9**

Metallic glasses: preparation, properties and applications.

Shape memory alloys (SMA): Characteristics, properties of NiTi alloy, application, advantages and disadvantages of SMA

Nanomaterials: synthesis – plasma arcing – chemical vapour deposition – sol-gels – electrodeposition – ball milling - properties of nanoparticles and applications.

Carbon nanotubes: fabrication – arc method – pulsed laser deposition – chemical vapour deposition - structure – properties and applications.

**TOTAL : 45 PERIODS**

**TEXT BOOKS:**

1. Charles Kittel ' Introduction to Solid State Physics', John Wiley & sons, 7<sup>th</sup> edition, Singapore (2007)
2. Charles P. Poole and Frank J. Owen, 'Introduction to Nanotechnology', Wiley India(2007) (for Unit V)

**CY2161****ENGINEERING CHEMISTRY – II****L T P C  
3 0 0 3****AIM**

To impart a sound knowledge on the principles of chemistry involving the different application oriented topics required for all engineering branches.

**OBJECTIVES**

- The student should be conversant with the principles electrochemistry, electrochemical cells, emf and applications of emf measurements.
- Principles of corrosion control
- Chemistry of Fuels and combustion
- Industrial importance of Phase rule and alloys
- Analytical techniques and their importance.

**UNIT I ELECTROCHEMISTRY****9**

Electrochemical cells – reversible and irreversible cells – EMF – measurement of emf – Single electrode potential – Nernst equation (problem) – reference electrodes –Standard Hydrogen electrode -Calomel electrode – Ion selective electrode – glass electrode and measurement of pH – electrochemical series – significance – potentiometer titrations (redox -  $\text{Fe}^{2+}$  vs dichromate and precipitation –  $\text{Ag}^{+}$  vs  $\text{Cl}^{-}$  titrations) and conduct metric titrations (acid-base – HCl vs, NaOH) titrations,

**UNIT II CORROSION AND CORROSION CONTROL****9**

Chemical corrosion – Pilling – Bedworth rule – electrochemical corrosion – different types – galvanic corrosion – differential aeration corrosion – factors influencing corrosion – corrosion control – sacrificial anode and impressed cathodic current methods – corrosion inhibitors – protective coatings – paints – constituents and functions – metallic coatings – electroplating (Au) and electroless (Ni) plating.

**UNIT III FUELS AND COMBUSTION****9**

Calorific value – classification – Coal – proximate and ultimate analysis metallurgical coke – manufacture by Otto-Hoffmann method – Petroleum processing and fractions – cracking – catalytic cracking and methods-knocking – octane number and cetane number – synthetic petrol – Fischer Tropsch and Bergius processes – Gaseous fuels- water gas, producer gas, CNG and LPG, Flue gas analysis – Orsat apparatus – theoretical air for combustion.

**UNIT IV PHASE RULE AND ALLOYS 9**

condensed phase rule – construction of phase diagram by thermal analysis – simple eutectic systems (lead-silver system only) – alloys – importance, ferrous alloys – nichrome and stainless steel – heat treatment of steel, non-ferrous alloys – brass and bronze.

**UNIT V ANALYTICAL TECHNIQUES 9**

Beer-Lambert's law (problem) – UV-visible spectroscopy and IR spectroscopy – principles – instrumentation (problem) (block diagram only) – estimation of iron by colorimetry – flame photometry – principle – instrumentation (block diagram only) – estimation of sodium by flame photometry – atomic absorption spectroscopy – principles – instrumentation (block diagram only) – estimation of nickel by atomic absorption spectroscopy.

**TOTAL: 45 PERIODS**

**TEXT BOOKS:**

1. P.C.Jain and Monica Jain, "Engineering Chemistry" Dhanpat Rai Pub, Co., New Delhi (2002).
2. S.S.Dara "A text book of Engineering Chemistry" S.Chand & Co.Ltd., New Delhi (2006).

**REFERENCES:**

**ME2151**

**ENGINEERING MECHANICS**

**L T P C  
3 1 0 4**

**OBJECTIVE**

At the end of this course the student should be able to understand the vectorial and scalar representation of forces and moments, static equilibrium of particles and rigid bodies both in two dimensions and also in three dimensions. Further, he should understand the principle of work and energy. He should be able to comprehend the effect of friction on equilibrium. He should be able to understand the laws of motion, the kinematics of motion and the interrelationship. He should also be able to write the dynamic equilibrium equation. All these should be achieved both conceptually and through solved examples.

**UNIT I BASICS & STATICS OF PARTICLES 12**

Introduction – Units and Dimensions – Laws of Mechanics – Lame's theorem, Parallelogram and triangular Law of forces – Vectors – Vectorial representation of forces and moments – Vector operations: additions, subtraction, dot product, cross product – Coplanar Forces – Resolution and Composition of forces – Equilibrium of a particle – Forces in space – Equilibrium of a particle in space – Equivalent systems of forces – Principle of transmissibility – Single equivalent force.

**UNIT II EQUILIBRIUM OF RIGID BODIES 12**

Free body diagram – Types of supports and their reactions – requirements of stable equilibrium – Moments and Couples – Moment of a force about a point and about an axis – Vectorial representation of moments and couples – Scalar components of a moment – Varignon's theorem – Equilibrium of Rigid bodies in two dimensions – Equilibrium of Rigid bodies in three dimensions – Examples

**UNIT III PROPERTIES OF SURFACES AND SOLIDS 12**  
 Determination of Areas and Volumes – First moment of area and the Centroid of sections – Rectangle, circle, triangle from integration – T section, I section, - Angle section, Hollow section by using standard formula – second and product moments of plane area – Rectangle, triangle, circle from integration – T section, I section, Angle section, Hollow section by using standard formula – Parallel axis theorem and perpendicular axis theorem – Polar moment of inertia – Principal moments of inertia of plane areas – Principal axes of inertia – Mass moment of inertia – Derivation of mass moment of inertia for rectangular section, prism, sphere from first principle – Relation to area moments of inertia.

**UNIT IV DYNAMICS OF PARTICLES 12**  
 Displacements, Velocity and acceleration, their relationship – Relative motion – Curvilinear motion – Newton’s law – Work Energy Equation of particles – Impulse and Momentum – Impact of elastic bodies.

**UNIT V FRICTION AND ELEMENTS OF RIGID BODY DYNAMICS 12**  
 Frictional force – Laws of Coloumb friction – simple contact friction – Rolling resistance – Belt friction.  
 Translation and Rotation of Rigid Bodies – Velocity and acceleration – General Plane motion.

**TOTAL: 60 PERIODS**

**TEXT BOOK:**

**EE2151 CIRCUIT THEORY LT P C**  
 (Common to EEE, EIE and ICE Branches) **3 1 0 4**

**UNIT I BASIC CIRCUITS ANALYSIS 12**  
 Ohm’s Law – Kirchoffs laws – DC and AC Circuits – Resistors in series and parallel circuits – Mesh current and node voltage method of analysis for D.C and A.C. circuits

**UNIT II NETWORK REDUCTION AND NETWORK THEOREMS FOR DC AND AC CIRCUITS: 12**  
 Network reduction: voltage and current division, source transformation – star delta conversion.  
 Thevenins and Novton & Theorem – Superposition Theorem – Maximum power transfer theorem – Reciprocity Theorem.

**UNIT IV TRANSISTORS 12**  
Principle of operation of PNP and NPN transistors – study of CE, CB and CC configurations and comparison of their characteristics – Breakdown in transistors – operation and comparison of N-Channel and P-Channel JFET – drain current equation – MOSFET – Enhancement and depletion types – structure and operation – comparison of BJT with MOSFET – thermal effect on MOSFET.

**UNIT V SPECIAL SEMICONDUCTOR DEVICES (Qualitative Treatment only) 12**  
Tunnel diodes – PIN diode, varactor diode – SCR characteristics and two transistor equivalent model – UJT – Diac and Triac – Laser, CCD, Photodiode, Phototransistor, Photoconductive and Photovoltaic cells – LED, LCD.

**TOTAL : 60 PERIODS**

**GE2151 BASIC ELECTRICAL AND ELECTRONICS ENGINEERING L T P C**  
(Common to branches under Civil, Mechanical and Technology faculty) **3 0 0 3**

**UNIT I ELECTRICAL CIRCUITS & MEASUREMENTS 12**  
Ohm's Law – Kirchoff's Laws – Steady State Solution of DC Circuits – Introduction to AC Circuits – Waveforms and RMS Value – Power and Power factor – Single Phase and Three Phase Balanced Circuits.  
Operating Principles of Moving Coil and Moving Iron Instruments (Ammeters and Voltmeters), Dynamometer type Watt meters and Energy meters.

**UNIT II ELECTRICAL MECHANICS 12**  
Construction, Principle of Operation, Basic Equations and Applications of DC Generators, DC Motors, Single Phase Transformer, single phase induction Motor.

**UNIT III SEMICONDUCTOR DEVICES AND APPLICATIONS 12**  
Characteristics of PN Junction Diode – Zener Effect – Zener Diode and its Characteristics – Half wave and Full wave Rectifiers – Voltage Regulation.  
Bipolar Junction Transistor – CB, CE, CC Configurations and Characteristics – Elementary Treatment of Small Signal Amplifier.

**UNIT IV DIGITAL ELECTRONICS 12**  
Binary Number System – Logic Gates – Boolean Algebra – Half and Full Adders – Flip-Flops – Registers and Counters – A/D and D/A Conversion (single concepts)

**UNIT V FUNDAMENTALS OF COMMUNICATION ENGINEERING 12**  
Types of Signals: Analog and Digital Signals – Modulation and Demodulation: Principles of Amplitude and Frequency Modulations.  
Communication Systems: Radio, TV, Fax, Microwave, Satellite and Optical Fibre (Block Diagram Approach only).

**TOTAL : 60 PERIODS**

**TEXT BOOKS:**

**GE2152 BASIC CIVIL & MECHANICAL ENGINEERING L T P C**  
(Common to branches under Electrical and I & C Faculty) **4 0 0 4**  
**A – CIVIL ENGINEERING**

**UNIT I SURVEYING AND CIVIL ENGINEERING MATERIALS 15**

**Surveying:** Objects – types – classification – principles – measurements of distances – angles – leveling – determination of areas – illustrative examples.

**Civil Engineering Materials:** Bricks – stones – sand – cement – concrete – steel sections.

**UNIT II BUILDING COMPONENTS AND STRUCTURES 15**

**Foundations:** Types, Bearing capacity – Requirement of good foundations.

**Superstructure:** Brick masonry – stone masonry – beams – columns – lintels – roofing – flooring – plastering – Mechanics – Internal and external forces – stress – strain – elasticity – Types of Bridges and Dams – Basics of Interior Design and Landscaping.

**TOTAL : 30 PERIODS**

**B – MECHANICAL ENGINEERING**

**UNIT III POWER PLANT ENGINEERING 10**

Introduction, Classification of Power Plants – Working principle of steam, Gas, Diesel, Hydro-electric and Nuclear Power plants – Merits and Demerits – Pumps and turbines –

working principle of Reciprocating pumps (single acting and double acting) – Centrifugal Pump.

**UNIT IV IC ENGINES 10**  
Internal combustion engines as automobile power plant – Working principle of Petrol and Diesel Engines – Four stroke and two stroke cycles – Comparison of four stroke and two stroke engines – Boiler as a power plant.

**UNIT V REFRIGERATION AND AIR CONDITIONING SYSTEM 10**  
Terminology of Refrigeration and Air Conditioning. Principle of vapour compression and absorption system – Layout of typical domestic refrigerator – Window and Split type room Air conditioner.

**TOTAL: 30 PERIODS**

**TOTAL : 45 PERIODS**

**HARDWARE / SOFTWARE REQUIREMENTS FOR A BATCH OF 30 STUDENTS**

**Hardware**

- 1 UNIX Clone Server
- 33 Nodes (thin client or PCs)
- Printer – 3 Nos.

**Software**

- . OS – UNIX Clone (33 user license or License free Linux)
- . Compiler - C

**LIST OF EXPERIMENTS**

1. Determination of Young's modulus of the material – non uniform bending.
2. Determination of Band Gap of a semiconductor material.
3. Determination of specific resistance of a given coil of wire – Carey Foster Bridge.
4. Determination of viscosity of liquid – Poiseuille's method.
5. Spectrometer dispersive power of a prism.
6. Determination of Young's modulus of the material – uniform bending.
7. Torsional pendulum – Determination of rigidity modulus.
  - **A minimum of FIVE experiments shall be offered.**
  - **Laboratory classes on alternate weeks for Physics and Chemistry.**
  - **The lab examinations will be held only in the second semester.**

**LIST OF EXPERIMENTS**

1. Conduct metric titration (Simple acid base)
2. Conduct metric titration (Mixture of weak and strong acids)
3. Conduct metric titration using  $\text{BaCl}_2$  vs  $\text{Na}_2\text{SO}_4$
4. Potentiometric Titration ( $\text{Fe}^{2+}$  /  $\text{KMnO}_4$  or  $\text{K}_2\text{Cr}_2\text{O}_7$ )
5. PH titration (acid & base)
6. Determination of water of crystallization of a crystalline salt (Copper sulphate)
7. Estimation of Ferric iron by spectrophotometry.
  - **A minimum of FIVE experiments shall be offered.**
  - **Laboratory classes on alternate weeks for Physics and Chemistry.**
  - **The lab examinations will be held only in the second semester.**

**List of Exercises using software capable of Drafting and Modeling**

1. Study of capabilities of software for Drafting and Modeling – Coordinate systems (absolute, relative, polar, etc.) – Creation of simple figures like polygon and general multi-line figures.
2. Drawing of a Title Block with necessary text and projection symbol.
3. Drawing of curves like parabola, spiral, involute using Bspline or cubic spline.
4. Drawing of front view and top view of simple solids like prism, pyramid, cylinder, cone, etc, and dimensioning.
5. Drawing front view, top view and side view of objects from the given pictorial views (eg. V-block, Base of a mixer, Simple stool, Objects with hole and curves).
6. Drawing of a plan of residential building ( Two bed rooms, kitchen, hall, etc.)
7. Drawing of a simple steel truss.
8. Drawing sectional views of prism, pyramid, cylinder, cone, etc,
9. Drawing isometric projection of simple objects.
10. Creation of 3-D models of simple objects and obtaining 2-D multi-view drawings from 3-D model.

**Note: Plotting of drawings must be made for each exercise and attached to the records written by students.**

**List of Equipments for a batch of 30 students:**

1. Pentium IV computer or better hardware, with suitable graphics facility -30 No.
2. Licensed software for Drafting and Modeling. – 30 Licenses
3. Laser Printer or Plotter to print / plot drawings – 2 No.

<b>EE2155</b>	<b>ELECTRICAL CIRCUIT LABORATORY</b>	<b>L T P C</b>
	(Common to EEE, EIE and ICE)	<b>0 0 3 2</b>

**LIST OF EXPERIMENTS**

1. Verification of ohm's laws and kirchoff's laws.
2. Verification of Thevemin's and Norton's Theorem
3. Verification of superposition Theorem
4. Verification of maximum power transfer theorem.
5. Verification of reciprocity theorem
6. Measurement of self inductance of a coil
7. Verification of mesh and nodal analysis.
8. Transient response of RL and RC circuits for DC input.
9. Frequency response of series and parallel resonance circuits.
10. Frequency response of single tuned coupled circuits.

**TOTAL: 45 PERIODS**

<b>EC2155</b>	<b>CIRCUITS AND DEVICES LABORATORY</b>	<b>L T P C</b>
		<b>0 0 3 2</b>

1. Verification of KVL and KCL
2. Verification of Thevenin and Norton Theorems.
3. Verification of superposition Theorem.
4. Verification of Maximum power transfer and reciprocity theorems.
5. Frequency response of series and parallel resonance circuits.
6. Characteristics of PN and Zener diode
7. Characteristics of CE configuration
8. Characteristics of CB configuration
9. Characteristics of UJT and SCR
10. Characteristics of JFET and MOSFET
11. Characteristics of Diac and Triac.
12. Characteristics of Photodiode and Phototransistor.

**TOTAL : 45 PERIODS**

<b>10</b>	<b>ENGLISH LANGUAGE LABORATORY (Optional)</b>	<b>L T P C</b>
		<b>0 0 2 -</b>

<b>1. Listening:</b>	<b>5</b>
Listening & answering questions – gap filling – Listening and Note taking- Listening to telephone conversations	

<b>2. Speaking:</b>	<b>5</b>
Pronouncing words & sentences correctly – word stress – Conversation practice.	

useful environment for the future generations and how to maintain ecological balance and preserve bio-diversity.

## **UNIT I INTRODUCTION TO ENVIRONMENTAL STUDIES AND NATURAL RESOURCES 9**

Definition, Scope and Importance – Need For Public Awareness – Forest Resources:- Use and Over - Exploitation, Deforestation, Case Studies, Timber Extraction, Mining, Dams and their Ground Water, Floods, Drought, Conflicts Over Water, Dams - Benefits and Problems – Mineral Resources:- Use Effects on Forests and Tribal People – Water Resources:- Use and Over-Utilization of Surface and Exploitation, Environmental Effects of Extracting and Using Mineral Resources, Case Studies – Food Resources: World Food Problems, Changes caused by Agriculture and Overgrazing, Effects of Modern Agriculture, Fertilizer- Pesticide Problems, Water Logging, salinity, Case Studies – Energy Resources:- Growing Energy Needs, Renewable and Non Renewable Energy Sources, Use of Alternate Energy Sources, Case Studies – Land Resources:- Land as a Resource, Land Degradation, Man Induced Landslides, Soil Erosion and Desertification – Role of an Individual in Conservation of Natural Resources – Equitable use of Resources for Sustainable Lifestyles. Field Study of Local Area to Document Environmental assets – River/Forest/Grassland/Hill/ Mountain.

## **UNIT II ECOSYSTEMS AND BIODIVERSITY 9**

Concepts of an Ecosystem – Structure and Function of an Ecosystem – Producers, Consumers and Decomposers – Energy Flow in the Ecosystem – Ecological Succession – Food Chains, Food Webs and Ecological Pyramids – Introduction, Types, Characteristic Features, Structure and Function of the (A) Forest Ecosystem (B) Grassland Ecosystem (C) Desert Ecosystem (D) Aquatic Ecosystems (Ponds, Streams, Lakes, Rivers, Oceans, Estuaries) – Introduction to Biodiversity – Definition: Genetic, Species and Ecosystem Diversity – Biogeographical Classification of India – Value of Biodiversity: Consumptive Use, Productive Use, Social, Ethical, Aesthetic and Option Values – Biodiversity at Global, National and Local Levels – India as a Mega-Diversity Nation – Hot-Spots of Biodiversity – Threats to Biodiversity: Habitat Loss, Poaching of Wildlife, Man-Wildlife Conflicts – endangered and Endemic Species of India – Conservation of Biodiversity: In-Situ and Ex-Situ conservation of Biodiversity. Field Study of Common Plants, Insects and Birds - Field Study of Simple Ecosystems – Pond, River, Hill Slopes, etc.

## **UNIT III ENVIRONMENTAL POLLUTION 9**

Definition – Causes, Effects and Control Measures of:- (A) Air Pollution (B) Water Pollution (C) Soil Pollution (D) Marine Pollution (E) Noise Pollution (F) Thermal Pollution (G) Nuclear Hazards – Soil Waste Management:- Causes, Effects and Control Measures of Urban and Industrial Wastes – Role of an Individual in Prevention of Pollution – Pollution Case Studies – disaster Management:- Floods, Earthquake, Cyclone and Landslides. Field Study of Local Polluted Site – Urban/Rural/Industrial/Agricultural

## **UNIT IV SOCIAL ISSUES AND THE ENVIRONMENT 9**

From Unsustainable To Sustainable Development – Urban Problems Related To energy – Water conservation, Rain Water Harvesting, Watershed Management – Resettlement and Rehabilitation of People, Its Problems and Concerns, Case Studies – Environmental Ethics:- Issues and Possible Solutions – Climate Change, Global Warming, Acid Rain, Ozone Layer Depletion, Nuclear Accidents and Holocaust, Case Studies – Wasteland Reclamation – Consumerism and Waste Products – Environment Production Act – Air (Prevention and Control of Pollution) Act – Water (Prevention and Control of Pollution)

Act – Wildlife Protection Act – Forest Conservation Act – Issues Involved in enforcement of Environmental Legislation – Public Awareness.

**UNIT V HUMAN POPULATION AND THE ENVIRONMENT 9**

Population Growth, Variation Among Nations – Population Explosion – Family Welfare Programme – environment and Human Health – Human Rights – Value Education – HIV /AIDS – Women and Child Welfare – Role of Information Technology in Environment and Human Health – Case Studies.

**L = 45 TOTAL = 45 PERIODS**

**TEXT BOOKS**

**EI2201**

**ELECTRICAL MACHINES  
(Common to EIE & ICE)**

**L T P C  
3 1 0 4**

**AIM**

To impart basic knowledge on Electrical machines, principles and its behavior.

**OBJECTIVES**

At the end of this course, student would have been exposed to:

- Theory of structures, operating principle, characteristics, and applications of D.C and A.C rotating machines and transformers in detail.
- Introductory knowledge on Special Machines.

**UNIT I D.C. MACHINES 12**

Construction of D.C. Machines - Principle and theory of operation of D.C. generator - EMF equation - Characteristics of D.C. generators - Armature reaction – Commutation - Principle of operation of D.C. motor - Voltage equation - Torque equation - Types of D.C. motors and their characteristics –Starters - Speed control of D.C. motors - Applications.

**UNIT II TRANSFORMERS 9**

Principle - Theory of ideal transformer - EMF equation - Construction details of shell and core type transformers - Tests on transformers - Equivalent circuit - Phasor diagram - Regulation and efficiency of a transformer - Introduction to three - phase transformer connections.

**UNIT III SYNCHRONOUS MACHINES 8**  
Principle of alternators:- Construction details, Equation of induced EMF and Vector diagram - Synchronous motor:- Starting methods, Torque, V curves, Speed control and Hunting.

**UNIT IV INDUCTION MACHINES 9**  
Induction motor:- Construction and principle of operation, Classification of induction motor, Torque equation, Condition for maximum torque, Equivalent Circuit, Starting methods and Speed control of induction motors.

**UNIT V SPECIAL MACHINES 7**  
Types of single phase motor –Double revolving field theory – Cross field theory – Capacitor start capacitor run motors – Shaded pole motor – Repulsion type motor – Universal motor – Hysteresis motor - Permanent magnet synchronous motor – Switched reluctance motor – Brushless D.C motor.

**L = 45 TOTAL = 45 PERIODS**

**EI2203 ELECTRONIC DEVICES AND CIRCUITS L T P C**  
**(Common to EIE & ICE) 3 0 0 3**

**AIM**

To provide an exposure to various electronic devices and electronic circuits.

**OBJECTIVES**

- At the end of the course, students’ will have the knowledge about functioning of various types of devices and design of various electronic circuits.

**UNIT I SEMICONDUCTOR DIODE AND BJT 9**  
PN Junction – Current components in a PN diode – Junction capacitance – Junction diode switching time – Zener diode – Varactor diode – Tunnel diode – Schottky diode – Transistor Structure – Basic Transistor operation – Transistor characteristics and parameters – The transistor as a switch, as an amplifier – Transistor bias circuits:- Voltage divider bias circuits, base bias circuits, emitter bias circuits, collector feedback bias circuits – DC load line – AC load line- bias stabilization, thermal runaway and thermal stability.

**UNIT II FET, UJT and SCR 9**  
JFET characteristics and parameters – JFET biasing, self bias, voltage divider bias – Q point, stability over temperature – MOSFET D-MOSFET, E-MOSFET – MOSFET characteristics and parameters – MOSFET biasing, zero bias, voltage divider bias

<b>UNIT II</b>	<b>TREE STRUCTURES</b>	<b>9</b>
Need for non-linear structures – Tree ADT – tree traversals – left child right sibling data structures for general trees – Binary Tree ADT – expression trees – applications of trees – binary search tree ADT		
<b>UNIT III</b>	<b>BALANCED SEARCH TREES AND INDEXING</b>	<b>9</b>
AVL trees – Binary Heaps – B-Tree – Hashing – Separate chaining – open addressing – Linear probing		
<b>UNIT IV</b>	<b>GRAPHS</b>	<b>9</b>
Definitions – Topological sort – breadth-first traversal - shortest-path algorithms – minimum spanning tree – Prim's and Kruskal's algorithms – Depth-first traversal – biconnectivity – euler circuits – applications of graphs		
<b>UNIT V</b>	<b>ALGORITHM DESIGN AND ANALYSIS</b>	<b>9</b>
Greedy algorithms – Divide and conquer – Dynamic programming – backtracking – branch and bound – Randomized algorithms – algorithm analysis – asymptotic notations – recurrences – NP-complete problems

<b>EI2202</b>	<b>ELECTRICAL MEASUREMENTS</b>	<b>L T P C</b>
	<b>(Common to EIE &amp; ICE)</b>	<b>3 1 0 4</b>

**AIM**

To provide adequate knowledge in electrical measurements and instrumentation.

**OBJECTIVES**

To make the students to gain a clear knowledge of the basic laws governing the operation of electrical instruments and the measurement techniques.

- i. Emphasis is laid on the meters used to measure current & voltage.
- ii. To have an adequate knowledge in the measurement techniques for power and energy, power and energy meters are included.
- iii. Elaborate discussion about potentiometer & instrument transformers.
- iv. Detailed study of resistance measuring methods.
- v. Detailed study of inductance and capacitance measurement.

<b>UNIT I</b>	<b>MEASUREMENT OF VOLTAGE AND CURRENT</b>	<b>9</b>
Galvanometers – Ballistic, D’Arsonval galvanometer – Theory, calibration, application – Principle, construction, operation and comparison of moving coil, moving iron meters, dynamometer, induction type & thermal type meter, rectifier type – Extension of range and calibration of voltmeter and ammeter – Errors and compensation.		
<b>UNIT II</b>	<b>MEASUREMENT OF POWER AND ENERGY</b>	<b>9</b>
Electrodynamometer type wattmeter – Theory & its errors – Methods of correction – LPF wattmeter – Phantom loading – Induction type kWh meter – Induction type energy meter – Calibration of wattmeter.		
<b>UNIT III</b>	<b>POTENTIOMETERS &amp; INSTRUMENT TRANSFORMERS</b>	<b>9</b>
DC potentiometer – Basic circuit, standardization – Laboratory type (Crompton’s) – AC potentiometer – Drysdale (polar type) type – Gall-Tinsley (coordinate) type – Limitations & applications – C.T and P.T construction, theory, operation and characteristics.		
<b>UNIT IV</b>	<b>RESISTANCE MEASUREMENT</b>	<b>9</b>
Measurement of low, medium & high resistance – Ammeter, voltmeter method – Wheatstone bridge – Kelvin double bridge – Series and shunt type ohmmeter – High resistance measurement – Megger – Direct deflection methods – Price’s guard-wire method – Earth resistance measurement.		
<b>UNIT V</b>	<b>IMPEDANCE MEASUREMENT</b>	<b>9</b>
A.C bridges – Measurement of inductance, capacitance – Q of coil – Maxwell Bridge – Wein’s bridge – Schering bridge – Anderson bridge – Campbell bridge to measure mutual inductance – Errors in A.C. bridge methods and their compensation – Detectors – Excited field – A.C. galvanometer – Vibration galvanometer

**OBJECTIVE**

To impart hands on experience in verification of circuit laws and theorems, measurement of circuit parameters, study of circuit characteristics and simulation of time response.

To expose the students to the basic operation of electrical machines and help them to develop experimental skills.

Verification of Kirchoff's voltage and current laws, Thevenin's and Norton's Theorems.

Measurement of time constant of series R-C electric circuits and frequency response of a series RLC circuit.

Study of the effect of Q on frequency response and bandwidth of series and parallel resonant circuits

Open circuit and load characteristics of self-excited D.C. generator.

Load test on D.C. shunt motor.

Load test on D.C. series motor.

Swinburne's test and speed control of D.C. shunt motor.

Load test on single phase transformer and open circuit and short circuit test on single phase transformer

Load test on single phase induction motor.

No load and blocked rotor tests on three phase induction motor (Determination of equivalent circuit parameters)

**P = 45 TOTAL = 45 PERIODS**

**Detailed Syllabus****1. Verification of Kirchoff's voltage and current laws, Thevenin's and Norton's Theorems****Aim**

To verify Kirchoff's voltage and current laws, Thevenin's and Norton's Theorems.

**Exercises**

a) Verify the Kirchoff's voltage and current law in a series circuit and in a circuit with series and parallel combination.

b) Determine the Thevenin's equivalent voltage  $V_{TH}$  and resistance  $R_{TH}$  of a DC circuit with a single voltage source.

(i) Verify experimentally the values of  $V_{TH}$  and  $R_{TH}$  in solving a series – parallel circuit.

(ii) Determine the values of Norton's constant – current source  $I_N$  and Norton's current - source resistance  $R_N$  in a DC circuit containing one or two voltage sources.

**2. Measurement of time constant of series R-C electric circuits and frequency response of a series RLC circuit.****(a) Measurement of time constant of series R-C electric circuits****Aim**

To determine experimentally the time taken by a capacitor to charge and discharge through a resistance.

### **Exercises**

- a. Determine experimentally the time taken by a capacitor to charge through a resistor and obtain a plot between voltage across capacitor and time.
- b. Determine experimentally the time taken by a capacitor to discharge through a resistor and obtain a plot between voltage across capacitor and time.

### **3.(b) Resonant frequency and frequency response of a series R L C circuit.**

#### **Aim**

To determine experimentally the resonant frequency  $f_R$  of a series RLC circuit.

To verify the resonant frequency of a series RLC circuit is given by the formula

$$f_R = 1 / 2\pi \sqrt{LC}.$$

To develop experimentally the frequency – response curve of a series RLC circuit

#### **Exercises**

Draw the frequency response curve of a series RLC circuit ( $V_L$  Vs  $f$ ,  $V_C$  Vs  $f$ )

Experimentally show the following

Resonant frequency  $f_r = 1 / 2\pi \sqrt{LC}$

The impedance at resonance  $Z = R$

### **4. Study of the effect of Q on frequency response and bandwidth of series and parallel resonant circuits**

#### **Aim**

To study the effect of Q on frequency response and on bandwidth at the half – power points of series and parallel resonant circuits.

#### **Exercises**

**Experimentally study the effect of Q on frequency response and bandwidth of RLC resonant circuit and obtain the following for three values of Q.**

I Vs frequency

Half power points

Bandwidth

$V_e$  Vs  $f$

$V_L$  Vs  $f$

Experimentally determine the resonant frequency in a parallel resonant circuit. Draw current versus frequency in parallel resonant circuit.

### **5. Open circuit and load characteristics of self excited DC Generator**

#### **Aim**

To conduct no load and load test on self excited generator and obtain the characteristics.

#### **Exercise**

Obtain the open circuit characteristics of a self excited D.C generator and determine critical resistance.

Draw the external and internal characteristics of a self excited D.C generator and compute full load regulation.

#### **Load Test on DC Shunt motor.**

#### **Aim**

To conduct load test on DC shunt motor and draw the characteristic curves.

#### **Exercise**

1. Draw the following characteristic curves for DC shunt motor

Output Vs  $\eta\%$

Output Vs Torque

Output Vs N

Output Vs  $I_L$

Torque Vs N

**6. Load Test on DC series motor**

**Aim**

To conduct load test on DC series motor and to obtain the characteristics.

**Exercise**

1. Draw the following characteristics curve for DC series motor
  - Output Vs  $\eta\%$
  - Output Vs T
  - Output Vs N
  - Output Vs I
  - Torque Vs N

**7. Swinburne's Test and speed control of DC shunt motor**

**Aim**

To conduct Swinburne's test and predetermine the performance characteristics of DC machine and speed control of DC motor.

**Exercise**

Predetermine efficiency at various load current while operating as a motor and generator and plot a graph for O/P Vs  $\eta\%$  output Vs  $\eta\%$

Draw the following curves for

$I_f$  Vs N at  $V_a = 0.8 V_a$  and  $V_a$

$V_a$  Vs N at  $0.8 I_f$  and  $I_f$

**8. Load Test On Single-Phase Transformer and Open Circuit And Short Circuit Tests On Single Phase Transformer**

**Aim**

To conduct load test on the given single phase transformer and determine its performance

2. To conduct O.C and S.C test on a single phase transformer and calculate its performance

**Exercise**

- a. Draw the following graph for single phase transformer
  - Output Vs  $\eta\%$
- b. Determine the equivalent circuit of the transformer.
- c. Predetermine the efficiency at different load at UPF and 0.8 Power factor lagging.
- d. Predetermine the full load regulation at different power factor.
- e. Draw the following curves
  - (i). Output Vs  $\eta\%$
  - (ii). Power factor Vs %Regulation

**9. Load test on single phase induction motor**

**Aim**

To obtain the load characteristics of single phase motor by load test.

**Exercise**

- a. Conduct the load test on given single-phase induction motor and draw the following curves.
  1. Output Vs %  $\eta$
  2. Output Vs Speed
  3. Output Vs Line current  $I_B$
  4. Output Vs Slip
  5. Output Vs Power factor

**10. No load and blocked rotor test on three-phase induction motor****Aim**

To conduct no load and blocked rotor test and to draw the equivalent circuit and predetermine its performance.

**Exercise**

- Determine the equivalent circuit parameters.
- Draw the circle diagram and predetermine the efficiency, torque, power factor, slip and line current for three load condition.  
Predetermine the performance characteristics using the equivalent circuit for three load condition

**REQUIREMENT FOR A BATCH OF 30 STUDENTS**

S.No.	Description of Equipment	Quantity required	Quantity available	Deficiency %
1.	D.C motor – Generator set D.C motor – Shunt Generator D.C motor – Compound Generator	2 set 2 set		
2.	D.C. Shunt Motor	2 Nos.		
3.	D.C. Series Motor	1 No.		
4.	D.C. Compound Motor	1 No.		
5.	Single phase transformers	7 Nos.		
6.	Three phase transformers	2 Nos.		
7.	D.C. Motor – Alternator set	4 sets		
8.	Three phase Induction Motor (Squirrel cage)	3 Nos.		
9.	Three phase slip ring Induction Motor	1 No.		
10.	Single phase Induction Motor	2 Nos.		
11.	Resistive load 3 phase – 2 , single phase - 3	5 Nos.		
12.	Inductive load	1 No.		
13.	Single phase Auto transformer	5 Nos.		
14.	Three phase Auto transformer	3 Nos.		
15.	Moving Coil Ammeter of different ranges	20 Nos.		
16.	Moving Coil Voltmeter of different ranges	20 Nos.		
17.	Moving Iron Ammeter of different ranges	20 Nos.		
18.	Moving Iron voltmeter of different ranges	20 Nos.		
19.	Wire wound Rheostats of different ratings	30 Nos.		

S.No.	Description of Equipment	Quantity required	Quantity available	Deficiency %
20.	Tachometers	10 Nos.		
21.	Single element wattmeters of different ranges UPF / LPF	20 Nos.		
22.	Double element wattmeters of different ranges	4 Nos.		
23.	Power factor meter	2 Nos.		
24.	Digital multimeter	5 Nos.		
25.	Three point starter, four point starter, DOL starter, manual star / delta starter, semi automatic and fully automatic star / delta starter	1 No each for study experiment		
26.	SCR based semi and fully controlled rectifier module	2 Nos.		
27.	SCR based chopper module	2 Nos.		
28.	SCR based inverter module	2 Nos.		
29.	SCR based AC voltage regulation module	2 Nos.		
30.	SCR, MOSFET, IGBT Trainer module	Each 2 Nos.		

**EE2209**

**DATA STRUCTURES AND ALGORITHMS LAB  
(Common to EEE, EIE & ICE)**

**L T P C  
0 0 3 2**

**Aim:** To develop skills in design and implementation of data structures and their applications.

1. Implement singly and doubly linked lists.
2. Represent a polynomial as a linked list and write functions for polynomial addition.
3. Implement stack and use it to convert infix to postfix expression
4. Implement array-based circular queue and use it to simulate a producer-consumer problem.
5. Implement an expression tree. Produce its pre-order, in-order, and post-order traversals.
6. Implement binary search tree.
7. Implement insertion in AVL trees.
8. Implement priority queue using heaps
9. Implement hashing techniques
10. Perform topological sort on a directed graph to decide if it is acyclic.
11. Implement Dijkstra's algorithm using priority queues
12. Implement Prim's and Kruskal's algorithms
13. Implement a backtracking algorithm for Knapsack problem
14. Implement a branch and bound algorithm for traveling salesperson problem
15. Implement any randomized algorithm.

**P = 45 TOTAL = 45 PERIODS**

## REQUIREMENT FOR A BATCH OF 30 STUDENTS

S.No.	Description of Equipment	Quantity required	Quantity available	Deficiency %
1.	Computer(Pentium 4)	40 Nos with one server		
2.	Dot matrix printer	3 Nos		
3.	Laser Printer	2 Nos		
4.	UPS (5 KVA)	2		
5.	Turbo C	40 Nodes		

**EE2253**

**CONTROL SYSTEMS  
(Common to EEE, EIE & ICE)**

**L T P C  
3 1 0 4**

**AIM**

To provide sound knowledge in the basic concepts of linear control theory and design of control system.

**OBJECTIVES**

- i To understand the methods of representation of systems and to derive their transfer function models.
- ii To provide adequate knowledge in the time response of systems and steady state error analysis.
- iii To accord basic knowledge in obtaining the open loop and closed-loop frequency responses of systems.
- iv To understand the concept of stability of control system and methods of stability analysis.
- v To study the three ways of designing compensation for a control system.

**UNIT I SYSTEMS AND THEIR REPRESENTATION 9**

Basic elements in control systems – Open and closed loop systems – Electrical analogy of mechanical and thermal systems – Transfer function – Synchros – AC and DC servomotors – Block diagram reduction techniques – Signal flow graphs.

**UNIT II TIME RESPONSE 9**

Time response – Time domain specifications – Types of test input – I and II order system response – Error coefficients – Generalized error series – Steady state error – P, PI, PID modes of feed back control.

**UNIT III FREQUENCY RESPONSE 9**

Frequency response – Bode plot – Polar plot – Determination of closed loop response from open loop response – Correlation between frequency domain and time domain specifications.

**UNIT IV STABILITY OF CONTROL SYSTEM 9**

Characteristics equation – Location of roots in S plane for stability – Routh Hurwitz criterion – Root locus construction – Effect of pole, zero addition – Gain margin and phase margin – Nyquist stability criterion.

**UNIT V COMPENSATOR DESIGN****9**

Performance criteria – Lag, lead and lag-lead networks – Compensator design using bode plot

**L = 45 T = 15 TOTAL = 60PERIODS****TEXT BOOKS**

**EI2252****TRANSDUCER ENGINEERING  
(Common to EIE & ICE)****L T P C  
3 0 0 3****AIM**

To provide adequate knowledge in sensors and transducers.

**OBJECTIVES**

- i. To impart knowledge about the principles and analysis of sensors.
- ii. Discussion of errors and error analysis.
- iii. Emphasis on characteristics and response of transducers.
- iv. To have an adequate knowledge in resistance transducers.
- v. Basic knowledge in inductance and capacitance transducers and exposure to other transducers.

**UNIT I SCIENCE OF MEASUREMENTS AND INSTRUMENTATION OF TRANSDUCERS****9**

Units and standards – Calibration methods – Static calibration – Classification of errors – Error analysis – Statistical methods – Odds and uncertainty – Classification of transducers – Selection of transducers.

**UNIT II CHARACTERISTICS OF TRANSDUCERS****9**

Static characteristics – Accuracy, precision, resolution, sensitivity, linearity -Dynamic characteristics – Mathematical model of transducer – Zero, I and II order transducers. Response to impulse, step, ramp and sinusoidal inputs.

**UNIT III VARIABLE RESISTANCE TRANSDUCERS****9**

Principle of operation, construction details, characteristics and application of potentiometer, strain gauge, resistance thermometer, Thermistor, hot-wire anemometer, piezoresistive sensor and humidity sensor.

**UNIT IV VARIABLE INDUCTANCE AND VARIABLE CAPACITANCE TRANSDUCERS****9**

Induction potentiometer – Variable reluctance transducers – EI pick up – Principle of operation, construction details, characteristics and application of LVDT –Capacitive transducer and types – Capacitor microphone – Frequency response.

**UNIT V OTHER TRANSDUCERS****9**

Piezoelectric transducer, Hall Effect transducer – Different types of Photo detectors-Digital transducers – Smart sensors - Fibre optic sensors, SQUID sensors, Film sensors, MEMS – Nano sensors.

**IC2251****DIGITAL PRINCIPLES AND DESIGN****L T P C  
3 0 0 3****AIM**

To introduce the fundamentals of Digital Circuits, combinational and sequential circuit, digital system design and VSI circuits.

**OBJECTIVES**

- i. To review Boolean algebra and to simplify the mathematical expressions using Boolean functions – simple problems.
- ii. To study implementation of combinational circuits
- iii. To study the design of various synchronous and asynchronous circuits.
- iv. To expose the students to programmable logic devices and digital logic families.
- v. To introduce the concepts of VLSI circuits

**UNIT I DESIGN OF COMBINATIONAL CIRCUITS****9**

Review of Boolean algebra – codes, simplification using K-maps & Quine McCluskey method. Design of adder, subtractor, comparators, code converters, encoders, decoders, multiplexers and demultiplexers. Function realization using gates and multiplexers.

**UNITII SYNCHRONOUS AND ASYNCHRONOUS SEQUENTIAL CIRCUITS 9**

Flip flops - SR, D, JK and T. Analysis of synchronous sequential circuits; design of synchronous sequential circuits – Completely and incompletely specified sequential circuits - state diagram; state reduction; state assignment, Counters – synchronous, a synchronous, updown and Johnson counters; shift registers.

Analysis of asynchronous sequential machines, state assignment, asynchronous Design problem.

**UNIT III PROGRAMMABLE LOGIC DEVICES 9**

Programmable logic Arrays, Programmable array logic, Realizing logic function using Multiplexers, Decoders, ROM, PLA, PAL. Design of sequential Networks using PAL, PLA – Programmable Gate arrays – FPGA – CPLD.

**UNIT IV DIGITAL LOGIC FAMILIES 9**

TTL, CMOS, NMOS, Dynamic MOS , ECL, I<sup>2</sup>L, Operating conditions, Parameters, Interpreting data sheets. Power supply grounding considerations for digital ICs, TTL – to – CMOS Interface, CMOS – to – TTL interface.

**UNIT V INTRODUCTION TO VLSI 9**

Fundamental consideration – NMOS, CMOS, Design of combinational logic gates in CMOS.

**L = 45 TOTAL =45PERIODS**

**EE2254 LINEAR INTEGRATED CIRCUITS AND APPLICATIONS L T P C**  
**(Common to EEE, EIE & ICE) 3 0 0 3**

**AIM**

To introduce the concepts for realizing functional building blocks in ICs, fabrications & application of ICs.

**OBJECTIVES**

- To study the IC fabrication procedure.
- To study characteristics; realize circuits; design for signal analysis using Op-amp ICs.
- To study the applications of Op-amp.
- To study internal functional blocks and the applications of special ICs like Timers, PLL circuits, regulator Circuits, ADCs.

**UNIT I IC FABRICATION 9**

IC classification, fundamental of monolithic IC technology, epitaxial growth, masking and etching, diffusion of impurities. Realisation of monolithic ICs and packaging. Fabrication of diodes, capacitance, resistance and FETs.

**UNIT II CHARACTERISTICS OF OPAMP 9**

Ideal OP-AMP characteristics, DC characteristics, AC characteristics, offset voltage and current: voltage series feedback and shunt feedback amplifiers, differential amplifier; frequency response of OP-AMP; Basic applications of op-amp – summer, differentiator and integrator.

**UNIT III APPLICATIONS OF OPAMP 9**

Instrumentation amplifier, first and second order active filters, V/I & I/V converters, comparators, multivibrators, waveform generators, clippers, clampers, peak detector, S/H circuit, D/A converter (R-2R ladder and weighted resistor types), A/D converter - Dual slope, successive approximation and flash types.

**UNIT IV SPECIAL ICS 9**

555 Timer circuit – Functional block, characteristics & applications; 566-voltage controlled oscillator circuit; 565-phase lock loop circuit functioning and applications, Analog multiplier ICs.

**UNIT V APPLICATION ICS 9**

IC voltage regulators - LM317, 723 regulators, switching regulator, MA 7840, LM 380 power amplifier, ICL 8038 function generator IC, isolation amplifiers, opto coupler, opto electronic ICs.

**L = 45 TOTAL = 45 PERIODS**

**EI2251**

**INDUSTRIAL INSTRUMENTATION – I  
(Common to EIE & ICE)**

**L T P C  
3 0 0 3**

**AIM**

To equip the students with relevant knowledge to suit the industrial requirements.

**OBJECTIVES**

- To provide sound knowledge about various techniques used for the measurement of industrial parameters.
- Discussion of load cells, torque meter and various velocity pick-ups.
- Exposure to various accelerometer pick-ups, vibrometers, density and viscosity pick-ups.
- To have an adequate knowledge about pressure transducers.
- To have an idea about the temperature standards, calibration and signal conditioning used in RTD's.
- To have a sound knowledge about thermocouples and pyrometry techniques.

**UNIT I MEASUREMENT OF FORCE, TORQUE AND VELOCITY 9**

Electric balance – Different types of load cells – Hydraulic, pneumatic strain gauge-Magneto elastic and Piezo electric load cell – Different methods of torque measurements: strain gauge-Relative angular twist-Speed measurement:-Capacitive tacho-Dragcup type tacho-D.C and A.C tachogenerators – Stroboscope.

**UNIT II MEASUREMENT OF ACCELERATION, VIBRATION AND DENSITY 9**

Accelerometers:- LVDT, Piezo-electric, Strain gauge and Variable reluctance type accelerometer – Mechanical type vibration instruments – Seismic instruments as an accelerometer – Vibrometers : Calibration of vibration pickups – Units of density and specific gravity – Baume scale, and API scale- Pressure head type densitometers- Float type densitometers – Ultrasonic densitometer- Bridge type gas densitometer.

**UNIT III PRESSURE MEASUREMENT 9**

Units of pressure-Manometers-Different types –Elastic type pressure gauges: Bourdon tube, bellows and diaphragms-Electrical methods: Elastic elements with LVDT and strain gauges –Capacitive type pressure gauge –Piezo-resistive pressure sensor-Resonator pressure sensor-Measurement of vacuum:-McLeod gauge-Thermal conductivity gauges- ionization gauges:- Cold cathode type and hot cathode type-Testing and calibration of pressure gauges-Dead weight tester.

**UNIT IV TEMPERATURE MEASUREMENT 9**

Definitions and standards-Primary and secondary fixed points –Calibration of thermometers - Different types of filled in system thermometer-Sources of errors in filled in systems and their compensation-Bimetallic thermometers – Electrical methods of temperature measurement-Signal conditioning of industrial RTDs and their characteristics-3 lead and 4 lead RTDs - Thermistors.

**UNIT V THERMOCOUPLES AND RADIATION PYROMETERS 9**

Thermocouples-Laws of thermocouple –Fabrication of industrial thermocouples –Signal conditioning of thermocouple output-Isothermal block reference junctions – Commercial circuits for cold junction compensation-Response of thermocouple –Special techniques for measuring high temperature using thermocouples – Radiation fundamentals-Radiation methods of temperature measurement – Total radiation pyrometers-Optical pyrometers-Two colour radiation pyrometers – Fiber optic temperature measurement.

4. Nakra, B.C., and Chaudry, K.K., "Instrumentation measurement and Analysis", TataMcGraw Hill publishing Company Limited, 2004.

**OBJECTIVES**

- (I) .To expose the fundamentals of thermodynamics and to be able to use it in accounting for the bulk behaviour of the sample physical systems.
- (II) To integrate the basic concepts into various thermal applications like IC engines, gas turbines, steam boiler, steam turbine, compressors, refrigeration and air conditioning.
- (III) To enlighten the various modes of heat transfer and their engineering applications. Use of standard steam tables, refrigeration tables and heat transfer data book are permitted)

**UNIT I BASIC CONCEPTS AND LAWS OF THERMODYNAMICS 12**

Classical approach: Thermodynamic systems – Control volume - System and surroundings – Universe – Properties - State-process – Cycle – Equilibrium - Work and heat transfer – Point and path functions - First law of thermodynamics for open and closed systems - First law applied to a control volume - SFEE equations [steady flow energy equation] - Second law of thermodynamics - Heat engines - Refrigerators and heat pumps - Carnot cycle - Carnot theorem.

**UNIT II IC ENGINES 8**

Air standard cycles: Otto, diesel and dual cycles and comparison of efficiency - Working Principle of four stroke and two stroke engines - Working principle of spark ignition and compression ignition engines - Application of IC engines.

**UNIT III STEAM BOILERS AND TURBINES 8**

Formation of steam - Properties of steam – Use of steam tables and charts – Steam power cycle (Rankine) - Modern features of high-pressure boilers – Mountings and accessories – Testing of boilers. Steam turbines: Impulse and reaction principle – Velocity diagrams – Compounding and governing methods of steam turbines (qualitative treatment only) - Layout and working principle of a steam power plant.

**UNIT IV COMPRESSORS, REFRIGERATION AND AIR CONDITIONING 8**

Positive displacement compressors – Reciprocating compressors – Indicated power – Clearance volume – Various efficiencies – Clearance ratio - Volume rate - Conditions for perfect and imperfect intercooling - Multi stage with intercooling – Rotary positive displacement compressors – Construction and working principle of centrifugal and axial flow compressors. Refrigeration - Various methods of producing refrigerating effects (RE) – Vapour compression cycle: P-H and T-S diagram - Saturation cycles - Effect of subcooling and super heating - (qualitative treatment only) - Airconditioning systems – Basic psychrometry - Simple psychrometric processes - Types of airconditioning systems -Selection criteria for a particular application (qualitative treatment only).

**UNIT V HEAT TRANSFER 9**

One-dimensional Heat Conduction: Plane wall – Cylinder – Sphere - Composite walls – Critical thickness of insulation –Heat transfer through extended surfaces (simple fins).Convection: Free convection and forced convection - Internal and external flow – Simple Empirical relations.

Radiation: Black–Gray bodies - Radiation Shape Factor (RSF) - Cooling of electronic components - Thermoelectric cooling – Chip cooling.

**L = 45 T = 15 Total = 60 PERIODS**

**Equipment**

1. Potentiometer – Linear displacement transducer kit – 1 No
2. Regulated power supply – 1 No
3. FET voltmeter, ordinary voltmeter – 1 No

**2. Characteristics of Strain gauge and Load cell****Aim**

To study the characteristics of strain gauge and load cell.

**Objectives**

1. To identify and study the characteristics of strain gauge and load cell.
2. To determine the sensitivity of strain gauge and load cell.
3. To determine the Young's modulus and hence the gauge factor of the given strain gauge.

**Exercise**

1. Load and Unload the load cell and strain gauge.
2. Measure the corresponding voltages during both loading and unloading and plot the calibration curve.
3. Find the Young's Modulus and gauge factor from the graph.

**Equipment**

1. Strain gauge and Load cell kit. – 1 No
2. Variable power supply – 1 No
3. Loads for measurement - a set

**3. Characteristics of LVDT, Hall Effect transducer and photoelectric tachometer.****3. (a) Characteristics of LVDT****Aim**

To study the characteristics of LVDT

**Objective**

1. To study the displacement of the core from its null position.
2. To study the variation of output voltage with change in displacement.

**Exercise**

1. Adjust the potentiometer knob present in the LVDT kit to bring the core to Null position (set the output voltage to be '0' volts)
2. Rotate the knob in the positive direction such that the LVDT scale moves in steps of 1cm and measure the corresponding output voltage.
3. Tabulate the readings.
4. Repeat the above procedure for negative displacement.
5. Plot the characteristic curve between displacement and output voltage.

**Equipments**

1. LVDT trainer kit – 1 No
2. Power supply – 1 No

**3. (b) Hall effect Transducer****Aim**

To study the characteristics of Hall Effect transducer.

**Objective**

1. To determine the positive hall voltage at the bottom of the transducer.
2. To determine the negative hall voltage.
3. To identify and study the characteristics of hall effect transducer.
4. To measure the displacement of a structural element.

**Exercise**

1. Study the internal configuration of Hall effect IC.
2. Patch the circuit diagram as per patching diagram.
3. Place the north pole of the magnet above the scale and take the reading air gap between hall IC and magnet to output voltage.
4. Place the south pole of the magnet above the scale and take the reading for different distances and plot the graph between air gap voltmeter readings.

**Equipments**

1. Hall effect characteristics trainer – 1 No
2. Power supply – 1 No
3. Voltmeter – 1 No

**3. (c) Photoelectric tachometer****Aim**

To study the characteristics of photoelectric tachometer using the servo motor speed control trainer kit.

**Objective**

1. To calculate the number of pulses generated in the photoelectric pick up.
2. To study the variation of speed with the variation of the input voltage.

**Exercise**

1. Connect the circuit as per instructions given in the manual.
2. Adjust the power supply.
3. Vary the speed of the motor by using rotary potentiometer and note down the readings.
4. Calculate number of pulses generated in the photoelectric pick up.
5. Draw the graph between voltage and speed.

**Equipments**

1. Speed control trainer kit – 1 No
2. Power supply – 1 No
3. Wires - Some
4. Multimeter – 1 No

**4. Characteristic of LDR, thermistor and thermocouple.****4. (a) Characteristics of LDR****Aim**

To determine the characteristics of LDR

**Objectives**

1. To determine the change in resistance for corresponding change in light intensity.
2. To determine the output voltage for corresponding change in voltage.

**Exercise**

1. The lamp for LDR is selected by using a select switch.
2. Initially the lamp is kept away from LDR.
3. Now the distance is decreased gradually and the corresponding values of voltages and resistances are taken.
4. Repeat the above steps for various positions of lamp.

**Equipments**

1. Photo conductive trainer kit – 1 No
2. Multimeter – 1 No
3. Connecting wires – 1 No

**4. (b) Characteristics of thermistor****Aim**

To determine the characteristics of thermistor

**Objectives**

To measure the resistance value for the corresponding changes in temperature.

**Exercise**

1. Measure the initial temperature of water.
2. Take another vessel full of water and boil it to  $100^{\circ}\text{C}$ .
3. Note down the readings for every  $5^{\circ}\text{C}$  fall of temperature in thermistor, thermometer and output voltage readings.
4. Plot the Thermistor characteristics.

**Equipments**

1. Thermistor Trainer kit – 1 No
2. Heater – 1 No
3. Thermistor – 1 No
4. Thermometer – 1 No
5. Voltmeter – 1 No

**4. (c) Characteristics of Thermocouple****Aim**

To determine the characteristics of thermocouple.

**Objectives**

To determine the voltage for corresponding change in temperature.

**Exercise**

1. Measure the initial temperature and temperature of boiling water ( $100^{\circ}\text{C}$ )
2. Calibrate the thermocouple in the hot water and measure the  $5^{\circ}\text{C}$  temperature fall in thermocouple.
3. The output voltage is noted for corresponding fall in temperature.

**Equipment**

1. Thermocouple trainer kit – 1 No
2. Thermocouple – 1 No
3. Voltmeter – 1 No
4. Heater – 1 No

**5. Step response characteristics of RTD and thermocouple and Study of smart transducers.**

**5. (a) Step response characteristics of RTD and Thermocouple**

**Aim**

To study the step response characteristics of RTD and thermocouple.

**Objective**

- a. To analyse the change in temperature due to change in emf in case of thermocouple.
- b. To analyse the change in temperature due to change in resistance in case of RTD.
- c. To observe the transients when step input [i.e sudden change in the input] is given.

**Exercise**

1. Calibrate the RTD and thermocouple at room temperature and 100°C alternatively.
2. Bring down the sensor to room temperature and provide a sudden change of input temperature to boiling point (i.e) 100°C.
3. Start the stop clock and tabulate the time taken for every 5°C rise of temperature.
4. Plot the step response for both the sensors.

**Equipment**

- |                                     |        |

| 5. Decade resistance box  | – 1 No |
| 6. Multimeter             | – 1 No |

**6. (b) Kelvin's Double Bridge**

**Aim**

To find the unknown value of low resistance using Kelvin's Double Bridge.

**Exercise**

Find the unknown value of low resistance.

**Equipment**

1. Power supply – 1 No
2. Fixed resistance – 1 No
3. Unknown resistors – 1 No
4. Decade resistance box – 1 No
5. Multimeter – 1 No
6. Galvanometer – 1 No
7. Bread board - 1 No
- 8.

**9. Schering Bridge for capacitance measurement and Anderson Bridge For inductance Measurement.**

**7.(a) Schering's Bridge**

**Aim**

To measure the unknown value of capacitance using Schering's bridge

**Exercise**

Measure the unknown value of capacitance.

**Equipment**

1. Resistors – Some set.
2. Capacitors – Some set.
3. Decade Resistance box – 1 No.
4. Decade Capacitance box – 1 No.
5. CRO – 1 No.
6. Function Generator – 1 No.

**7.(b) Anderson's Bridge**

**Aim**

To measure the unknown value of inductance using Anderson's Bridge

**Exercise**

Measure the unknown value of inductance.

**Equipment**

1. Resistors – Some set
2. Decade Inductance box – 1 No.
3. Decade Condenser box – 1 No.
4. Regulated power supply – 1 No.
5. CRO – 1 No.
6. Bread board - 1 No.

**8. Calibration of Single-phase Energy meter and wattmeter.**

**8. (a) Calibration Of Single Phase Energy Meter**

**Aim**

To calibrate the given energy meter using two substandard wattmeters and to obtain percentage error.

**Exercise**

Calibrate the given energy meter and draw % error Vs load graph.

**Equipment**

1. Wattmeter – 2 No
2. Voltmeter – 1 No

2. Implementation of Boolean Functions, Adder/ Subtractor circuits.
- 3a) Code converters, Parity generator and parity checking, Excess-3, 2s Complement, Binary to Gray code using suitable IC's .
- 3(b) Encoders and Decoders: Decimal and Implementation of 4-bit shift registers in SISO, SIPO, PISO, PIPO modes using suitable IC's.
4. Counters: Design and implementation of 4-bit modulo counters as synchronous and Asynchronous types using FF IC's and specific counter IC.
- 5 Shift Registers:  
Design and implementation of 4-bit shift registers in SISO, SIPO, PISO, PIPO modes using suitable IC's.
- 6 Multiplex/ De-multiplex:  
Study of 4:1; 8:1 multiplexer and Study of 1:4; 1:8 demultiplexer
- 7 Timer IC application:  
Study of NE/SE 555 timer in Astable, Monostable operation.
8. Application of Op-Amp:  
Slew rate verifications, inverting and non-inverting amplifier, Adder, comparator, Integrater and Differentiator.
- 9 Study of Analog to Digital Converter and Digital to Analog Converter: Verification of A/D conversion using dedicated IC's.
- 10 Study of VCO and PLL ICs:
  - i. Voltage to frequency characteristics of NE/ SE 566 IC.
  - ii. Frequency multiplication using NE/SE 565 PLL IC.

**P = 45 TOTAL = 45PERIODS**

### **Detailed Syllabus**

1. **Study of Basic Digital IC's.**  
(Verification of truth table for AND, OR, EXOR, NOT, NOR, NAND, JK FF, RS FF, D FF)  
**Aim**  
To test of ICs by using verification of truth table of basic ICs.  
**Exercise**  
Breadboard connection of ICs with truth table verification using LED's.
2. **Implementation of Boolean Functions, Adder/ Subtractor circuits.**  
[Minimizations using K-map and implementing the same in POS, SOP from using basic gates]  
**Aim**  
Minimization of functions using K-map implementation and combination Circuit.  
**Exercise**
  1. Realization of functions using SOP, POS, form.
  2. Addition, Subtraction of atleast 3 bit binary number using basic gate IC' s.

**3a) Code converters, Parity generator and parity checking, Excess 3, 2's Complement, Binary to grey code using suitable ICs .**

**Aim**

Realizing code conversion of numbers of different base.

**Exercise**

1. Conversion Binary to Grey, Grey to Binary; 1's, 2's complement of numbers addition, subtraction,
2. Parity checking of numbers using Gates and with dedicated IC's

**3b) Encoders and Decoders: Decimal and Implementation of 4-bit shift registers in SISO, SIPO, PISO, PIPO modes using suitable ICs.**

**Exercise**

1. Decimal to binary Conversion using dedicated ICs.
2. BCD – 7 Segment display decoder using dedicated decoder IC & display.

**4. Counters: Design and implementation of 4-bit modulo counters as synchronous and asynchronous types using FF IC's and specific counter IC.**

**Aim**

Design and implementation of 4 bit modulo counters.

**Exercise**

1. Using flipflop for up-down count synchronous count.
2. Realization of counter function using dedicated ICs.

**5. Shift Registers:**

Design and implementation of 4-bit shift registers in SISO, SIPO, PISO, PIPO modes using suitable IC's.

**Aim**

Design and implementation of shift register.

**Exercise**

1. Shift Register function realization of the above using dedicated IC's For SISO, SIPO, PISO, PIPO, modes of at least 3 bit binary word.
2. Realization of the above using dedicated IC's.

**6. Multiplex/ De-multiplex.**

Study of 4:1; 8:1 multiplexer and Study of 1:4; 1:8 demultiplexer

**Aim**

To demonstrate the addressing way of data channel selection for multiplex De-multiplex operation.

**Exercise**

1. Realization of mux-demux functions using direct IC's.
2. Realization of mux-demux using dedicated IC's for 4:1, 8:1, and vice versa.

**7. Timer IC application. Study of NE/SE 555 timer in Astable, Monostable operation.**

**Aim**

To design a multi vibrator circuit for square wave and pulse generation.

**Exercise**

1. Realization of Astable multivibrator & monostable multivibrator circuit using Timer IC.
2. Variation of R, C, to vary the frequency, duty cycle for signal generator.

**8. Application of Op-Amp-I**

Slew rate verifications, inverting and non-inverting amplifier, Adder, comparator, Integrater and Differentiator.

**Aim**

Design and Realization of Op-Amp application.

**Exercise**

1. Verification of Op-Amp IC characteristics.
2. Op-Amp IC application for simple arithmetic circuit.
3. Op-Amp IC application for voltage comparator wave generator and wave shifting circuits.

**9. Study of Analog to Digital Converter and Digital to Analog Converter: Verification of A/D conversion using dedicated IC's.****Aim**

Realization of circuit for digital conversions.

**Exercise**

1. Design of circuit for analog to digital signal conversion using dedicated IC's.
2. Realization of circuit using dedicated IC for digital analog conversion.

**10. Study of VCO and PLL ICs**

- i) Voltage to frequency characteristics of NE/ SE 566 IC.
- ii) Frequency multiplication using NE/SE 565 PLL IC.

**Aim**

Demonstration of circuit for communication application

**Exercise**

1. To realize V/F conversion using dedicated IC's vary the frequency of the generated signal.
2. To realize PLL IC based circuit for frequency multiplier, divider.

**REQUIREMENT FOR A BATCH OF 30 STUDENTS**

**EC2312                      MICROPROCESSORS AND MICRO CONTROLLER                      L T P C**  
**3 0 0 3**

### AIM

To introduce Microprocessor Intel 8085 and 8086 and the Micro Controller 8051

### OBJECTIVES

- To study the Architecture of 8085 & 8086, 8051
- To study the addressing modes & instruction set of 8085 & 8051.
- To introduce the need & use of Interrupt structure 8085 & 8051.
- To develop skill in simple program writing for 8051 & 8085 and applications
- To introduce commonly used peripheral / interfacing ICs

### **UNIT I                      8085 and 8086 PROCESSOR                      9**

Hardware Architecture pinouts - Signals – Memory interfacing – I/O ports and data transfer concepts – Timing Diagram – Interrupt structure.

### **UNIT II                      PROGRAMMING OF 8085 PROCESSOR                      9**

Instruction format and addressing modes – Assembly language format – Data transfer, data manipulation & control instructions – Programming: Loop structure with counting & Indexing - Look up table - Subroutine instructions - stack.

### **UNIT III                      PERIPHERAL INTERFACING                      9**

Study of Architecture and programming of ICs: 8255 PPI, 8259 PIC, 8251 USART, 8279 Key board display controller and 8253 Timer/ Counter – Interfacing with 8085 - A/D and D/A converter interfacing.

### **UNIT IV                      8051 MICRO CONTROLLER                      9**

**EI2302**

**ANALYTICAL INSTRUMENTS**

**LT P C  
3 0 0 3**

**AIM**

The course is designed to equip the students with an adequate knowledge of a number of analytical tools which are useful for clinical analysis in hospitals, drugs and pharmaceutical laboratories and above all for environmental Pollution Monitoring.

**OBJECTIVES**

- To provide various techniques and methods of analysis which occur in the various regions of the spectrum. These are the powerful tools used in Clinical and Research laboratories.
- To give unique methods of separation of closely similar materials, the most powerful being gas chromatography.
- To study important methods of analysis of industrial gases. Awareness and control of pollution in the environment is of vital importance.
- To bring out the latest ideas on ion-selective electrodes as well as biosensors which have potential applications in medical field, food and beverage industries.
- To provide the important electromagnetic resonance and microscopic methods of analysis. Further they are both sensitive and specific and often are characterized by good accuracy. NMR & ESR and microscopic techniques are useful in structure determination.

**UNIT I            COLORIMETRY AND SPECTROPHOTOMETRY**

**9**

Special methods of analysis – Beer-Lambert law – Colorimeters – UV-Visible spectrophotometers – Single and double beam instruments – Sources and detectors – IR Spectrophotometers – Types – Attenuated total reflectance flame photometers – Atomic absorption spectrophotometers – Sources and detectors – FTIR spectrophotometers – Flame emission photometers – Fluorescence spectrophotometer

- UNIT II CHROMATOGRAPHY** **9**  
 Different techniques – Gas chromatography – Detectors – Liquid chromatographs – Applications – High-pressure liquid chromatographs – Applications.
- UNIT III INDUSTRIAL GAS ANALYZERS AND POLLUTION MONITORING INSTRUMENTS** **9**  
 Types of gas analyzers – Oxygen, NO<sub>2</sub> and H<sub>2</sub>S types, IR analyzers, thermal conductivity analyzers, analysis based on ionization of gases. Air pollution due to carbon monoxide, hydrocarbons, nitrogen oxides, sulphur dioxide estimation - Dust and smoke measurements.
- UNIT IV pH METERS AND DISSOLVED COMPONENT ANALYZERS** **9**  
 Principle of pH measurement, glass electrodes, hydrogen electrodes, reference electrodes, selective ion electrodes, ammonia electrodes, cyclic voltametry, biosensors, dissolved oxygen analyzer – Sodium analyzer – Silicon analyzer.
- UNIT V ELECTRO MAGNETIC RESONANCE AND MICROSCOPIC TECHNIQUES** **9**  
 NMR – Basic principles – NMR spectrometer - Applications. Electron spin Resonance spectroscopy – Basic principles, Instrumentation and applications. Scanning Electron Microscope (SEM), - Basic principles, Instrumentation and applications. Transmission Electron Microscope (TEM) – Basic principles – Instrumentation and applications. Mass spectrometers – Different types – Applications.

**TOTAL : 45 PERIODS**

**EI2303**

**INDUSTRIAL INSTRUMENTATION – II**

**LT P C  
3 0 0 3**

**AIM**

To equip the students with relevant knowledge to suit the industrial requirement.

**OBJECTIVES**

- i. To study about humidity and moisture measurements.
- ii. To study about mechanical flow meters and their installation.
- iii. To study about area flow meters, mass flow meters and calibration.
- iv. To know elaborately about non-content type flow meters.
- v. To know about various types of level measurements adopted in industry environment.

**UNIT I VARIABLE HEAD TYPE FLOWMETERS 9**

Variable head type flow meters: – Orifice plate – Venturi tube – Flow nozzle – Dall tube – Installation of head flow meters – Pitot tube.

**UNIT II QUANTITY METERS, AREA FLOW METERS AND MASS FLOW METERS 9**

Positive displacement flow meters: – Nutating disc, Reciprocating piston, Oval gear and Helix type flow meters – Inferential meter – Turbine flow meter – Area flow meter: – Rotameter – Theory and installation – Mass flow meter: – Angular momentum – Thermal, Coriolis type mass flow meters – Calibration of flow meters – Dynamic weighing methods.

**UNIT III ELECTRICAL TYPE FLOW METER 9**

Principle and constructional details of electromagnetic flow meter – Ultrasonic flow meters – Laser Doppler anemometer – Vortex shedding flow meter – Target flow meter – Guidelines for selection of flow meter – Open channel flow measurement – Solid flow rate measurement

**UNIT IV LEVEL MEASUREMENT 9**

Level measurement: – Float, Displacer type – Bubbler system – Electrical level gauge: – Resistance – Capacitance – Nuclear radiation and Ultrasonic type – Boiler drum level measurement: – Differential pressure method – Hydra step method.

**UNIT V MEASUREMENT OF VISCOSITY, HUMIDITY AND MOISTURE 9**

Viscosity: – Rotameter type viscometer – Consistency meters – Dry and wet bulb psychrometers – Hot wire electrode type hygrometer – Dew cell – Electrolysis type hygrometer – Commercial type dew point meter – Moisture measurement: – Different methods of Moisture measurement – Application of moisture measurement .

**EE2301**

**POWER ELECTRONICS**

**L T P C  
3 0 0 3**

**AIM**

Learning how to apply the electronic devices for conversion, control and conditioning of electronic power.

## OBJECTIVES

- To get an overview of different types of power semi-conductor devices and their switching characteristics.
- To understand the operation, characteristics and performance parameters of controlled rectifiers.
- To study the operation, switching techniques and basic topologies of DC-DC switching regulators.
- To learn the different modulation techniques of pulse width modulated inverters and to understand the harmonic reduction methods.
- To study the operation of AC voltage controller and Matrix converters.
- To study simple applications

### UNIT I            POWER SEMI-CONDUCTOR DEVICES            9

Study of switching devices, - Frame, Driver and snubber circuit of SCR, TRIAC, IGBT, MOSFET,- Turn-on and turn-off characteristics, switching losses, Communication circuits for SCR,

### UNIT II            PHASE-CONTROLLED CONVERTERS            9

2-pulse, 3-pulse and 6-pulse converters – Effect of source inductance – performance parameters – Reactive power control of converters – Dual converters - Battery charger.

### UNIT III            DC TO DC CONVERTER            9

Step-down and step-up chopper - Time ratio control and current limit control – Buck, boost, buck-boost converter, concept of Resonant switching - SMPS.

### UNIT IV            INVERTERS            9

Single phase and three phase (both  $120^\circ$  mode and  $180^\circ$  mode) inverters - PWM techniques: Sinusoidal PWM, modified sinusoidal PWM - multiple PWM – Introduction to space vector modulations - Voltage and harmonic control - Series resonant inverter - Current source inverter - Induction Heating.

### UNIT V            AC TO AC CONVERTERS            9

Single – phase AC voltage controllers – Multistage sequence control - single and three phase cycloconverters – Integral cycle control for Temperature control – Powerfactor control – Matrix converters.

**EC2313**

**MICROPROCESSOR AND MICROCONTROLLER  
LABORATORY**

**L T P C  
0 0 3 2**

### **List of experiments with objective and exercise:**

#### **Objective**

To understand programming using instruction sets of processors and microcontroller.

#### **8-bit Microprocessor**

1. Simple arithmetic operations:
  - Multi precision addition / subtraction / multiplication / division.
2. Programming with control instructions:
  - Increment / Decrement.
  - Ascending / Descending order.
  - Maximum / Minimum of numbers.
  - Rotate instructions.
  - Hex / ASCII / BCD code conversions.
3. Peripheral Interface Experiments:
  - Simple experiments using 8251, 8279, 8254, 8259, 8255.
4. Interface Experiments:
  - A/D Interfacing.
  - D/A Interfacing.
  - Traffic light controller.
5. Programming practice on assembler and simulator tools.

#### **8-bit Micro controller**

6. Demonstration of basic instructions with 8051 Micro controller execution, including:
  - Conditional jumps, looping
  - Calling subroutines.
  - Stack parameter testing

7. Parallel port programming with 8051 using port 1 facility:
  - Stepper motor
  - D / A converter.
8. Programming Exercise on
  - RAM direct addressing
  - Bit addressing
9. Programming practice using simulation tools and C - compiler
  - Initialize timer
  - Enable interrupts.
10. Study of micro controllers with flash memory.

**TOTAL : 45 PERIODS**

## **Detailed Syllabus**

### **8-bit Microprocessor**

#### **1. Simple arithmetic operations**

- a. Multi precision addition / subtraction / multiplication / division.

#### **Aim**

To perform simple arithmetic operations using assembly language program.

#### **Exercise**

#### **1. Write an assembly language program using 8085 instructions set to perform the following arithmetic operations**

1. Addition of two 8 bit numbers
2. Subtraction of two 8 bit numbers
3. Multiplication of two 8 bit numbers
4. Division of two 8 bit numbers

#### **2. Programming with control instructions**

- I. Increment / Decrement.
- II. Ascending / Descending order.
- III. Maximum / Minimum of numbers.
- IV. Rotate instructions.
- V. Hex / ASCII / BCD code conversions.

#### **Aim**

To write an assembly language program using the control instructions

#### **Exercise**

#### **1. Using the control instructions of 8085 microprocessor write assembly language programs to perform the following**

1. Arrange the given array of data in ascending and descending order
2. Find the maximum and minimum number in a group of data given.
3. Conversion of the following
  1. ASCII to HEX code
  2. Conversion of HEX to ASCII code
  3. Conversion of BCD to HEX
  4. Conversion of HEX to BCD

#### **2 Peripheral Interface Experiments:**

- i. Simple experiments using 8251, 8279, 8254, 8259, 8255.

#### **4 Interface Experiments:**

- A/D Interfacing.

- D/A Interfacing.
- Traffic light controller.

### **Aim**

To write an assembly language program to convert Analog input to Digital output and Digital input to Analog output.

### **Exercise**

1. Write an assembly language program (using 8085) to convert Analog input to Digital output
2. Write an assembly language programs to convert digital input into analog signal of following type.
  - Square wave
  - Triangular wave
  - Sawtooth wave

## **5. Programming practice on assembler and simulator tools.**

### **8-bit Micro controller**

#### **6. Demonstration of basic instructions with 8051 Micro controller execution, including:**

- Conditional jumps, looping
- Calling subroutines.
- Stack parameter testing

### **Aim**

To demonstrate use of control logic instructors.

### **Exercise**

1. To write programs which can include instruction sets for jump, loop, call, return, stack.
2. To observe the change in status registers and various relevant registers.

#### **7 Parallel port programming with 8051 using port 1 facility:**

- Stepper motor
- D / A converter.

### **Aim**

To demonstrate the access of parallel port.

### **Exercise**

1. To develop command words on choice of port, addressing of port pins.
2. To vary timing cycle of speed of motor, direction of motor.
3. To demonstrate generation of sine wave saw tooth, triangular wave of various frequency, amplitude.

#### **8 Programming Exercise on**

- RAM direct addressing
- Bit addressing

### **Aim**

To write the program to check the content of memory locations using READ / WRITE instructions using different addressing modes.

### **Exercise**

To READ / WRITE the content of RAM registers, bits and the RAM from location 1 to N and check the display with say LEDs.

### 9 Programming practice using simulation tools and C – compiler

- Initialize timer
- Enable interrupts.

#### Aim

To use the facility of popular Micro controller programming tools like KEIL or RIDE software.

#### Exercise

1. To study the initializing of timer interrupt with context saving like increasing or decreasing the counter count.
2. To demonstrate use of instruction like cjne, djnz, jb etc.

### 10 Study of micro controllers with flash memory.

#### Aim

To familiarize of loading and executing on flash memory.

#### Exercise

1. To write the program to generate sine wave, square wave etc.
2. To vary the frequency, amplitude of the signal.

### REQUIREMENT FOR A BATCH OF 30 STUDENTS

S.No.	Description of Equipment	Quantity required
1.	8085 Microprocessor Trainer with Power supply	10
2.	8051 Micro controller Trainer Kit with power supply	10
3.	8255 Interface board	5
4.	8251 Interface board	5
5.	8259 Interface board	5
6.	8279 Keyboard/Display Interface Board	5
7.	8253 timer counter	5
8.	ADC and DAC card	5 each
9.	Stepper motor with Controller	1
10.	Traffic Light Control System	1
11.	Regulation power supply	1
12.	Universal ADD-ON modules	3
13.	8 Digit Multiplexed Display Card	2
14.	Function Generator	3
15.	Multimeter	3
16.	C Compilers	2
17.	KEIL or RIDE software	2 licenses
18.	8051 Microcontroller trainer kit with flash memory	2

19.	AT89C51 Microcontroller Kit	2
-----	-----------------------------	---

**CS2312**

**OBJECT- ORIENTED PROGRAMMING LABORATORY**

**L T P C  
0 0 3 2**

**Aim:**

To develop object-oriented programming skills using C++ and Java

1. Function overloading, default arguments in C++
2. Simple class design in C++, namespaces, objects creations
3. Class design in C++ using dynamic memory allocation, destructor, copy constructor
4. Operator overloading, friend functions
5. Overloading assignment operator, type conversions
6. Inheritance, run-time polymorphism
7. Template design in C++
8. I/O, Throwing and Catching exceptions
9. Program development using STL
10. Simple class designs in Java with Javadoc
11. Designing Packages with Javadoc comments
12. Interfaces and Inheritance in Java
13. Exceptions handling in Java
14. Java I/O
15. Design of multi-threaded programs in Java

**TOTAL : 45 PERIODS**

5.	Turbo C++	40 Nodes
6.	(Java 2 SDK) JDK 5.0 update 6 (1.5.0 - Internal Version No.)	40 Nos.

Globalisation has brought in numerous opportunities for the teeming millions, with more focus on the students' overall capability apart from academic competence. Many students, particularly those from non-English medium schools, find that they are not preferred due to their inadequacy of communication skills and soft skills, despite possessing sound knowledge in their subject area along with technical capability. Keeping in view their pre-employment needs and career requirements, this course on Communication Skills Laboratory will prepare students to adapt themselves with ease to the industry environment, thus rendering them as prospective assets to industries. The course will equip the students with the necessary communication skills that would go a long way in helping them in their profession.

**Objectives:**

- To equip students of engineering and technology with effective speaking and listening skills in English.
- To help them develop their soft skills and interpersonal skills, which will make the transition from college to workplace smoother and help them excel in their job.
- To enhance the performance of students at Placement Interviews, Group Discussions and other recruitment exercises.

<b>I. PC based session</b>	<b>(Weightage 40%)</b>	<b>24 periods</b>
----------------------------	------------------------	-------------------

**A. English Language Lab (18 Periods)**

**1. Listening Comprehension: (6)**

Listening and typing – Listening and sequencing of sentences – Filling in the blanks - Listening and answering questions.

**2. Reading Comprehension: (6)**

Filling in the blanks - Close exercises – Vocabulary building - Reading and answering questions.

**3. Speaking: (6)**

Phonetics: Intonation – Ear training - Correct Pronunciation – Sound recognition exercises – Common Errors in English.

Conversations: Face to Face Conversation – Telephone conversation – Role play activities (Students take on roles and engage in conversation)

**B. Viewing and discussing audio-visual materials (6 periods)**  
**(Samples are available to learn and practice)**

**1. Resume / Report Preparation / Letter Writing (1)**

Structuring the resume / report - Letter writing / Email Communication - Samples.

2. **Presentation skills:** (1)  
Elements of effective presentation – Structure of presentation - Presentation tools – Voice Modulation – Audience analysis - Body language – Video samples
3. **Soft Skills:** (2)  
Time management – Articulateness – Assertiveness – Psychometrics – Innovation and Creativity - Stress Management & Poise - Video Samples
4. **Group Discussion:** (1)  
Why is GD part of selection process ? - Structure of GD – Moderator – led and other GDs - Strategies in GD – Team work - Body Language - Mock GD -Video samples
5. **Interview Skills:** (1)  
Kinds of interviews – Required Key Skills – Corporate culture – Mock interviews- Video samples.

<b>II. Practice Session</b>	<b>(Weightage – 60%)</b>	<b>24 periods</b>
-----------------------------	--------------------------	-------------------

1. **Resume / Report Preparation / Letter writing:** Students prepare their own resume and report. (2)
2. **Presentation Skills:** Students make presentations on given topics. (8)
3. **Group Discussion:** Students participate in group discussions. (6)
4. **Interview Skills:** Students participate in Mock Interviews (8)

5.	Collar mike	1 No.
6.	Cordless mikes	1 No.
7.	Audio Mixer	1 No.
8.	DVD Recorder / Player	1 No.
9.	LCD Projector with MP3 /CD /DVD provision for audio / video facility - <b>Desirable</b>	1 No.

EI2304

INDUSTRIAL INSTRUMENTATION LABORATORY

L T P C  
0 0 3 2

### OBJECTIVE

The training gained by the student in this area will be of immense help and ease for him in any industrial establishment.

1. Discharge coefficient of orifice plate
2. Calibration of pressure gauge
3. Torque measurement
4. Viscosity measurement
5. Vacuum pressure measurement
6. Level measurement using d/p transmitter
7. UV – Visible spectrophotometer
8. IR spectrophotometer
9. pH meter standardization and measurement of pH values of solutions
10. Measurements of conductivity of test solutions.

**TOTAL : 45 PERIODS**

### Detailed syllabus:

#### 1. Discharge coefficient of orifice plate

##### Aim

To find the discharge co-efficient of orifice plate.

##### Exercise

Find the discharge co-efficient  $C_d$ .

##### Procedure

1. Open the outlet valve completely and switch on the motor.
2. Now open the inlet valve.
3. With a particular opening at the inlet valve note the reading on two times of manometer and compute the value of  $x$ .
4. Compute the actual discharge using the collecting tank and stop watch and the theoretical discharge.
5. Now change the opening of the inlet valve and note the reading of manometer and compare and discharge.
6. Calculate the value of  $C_d$ .

**Equipment**

1. Orifice meter – 1 No
2. Stopwatch – 1 No

**2. Calibration of Pressure Gauge****Aim**

To calibrate the given pressure gauge using dead weight tester.

**Exercise**

Calibrate the pressure gauge and discuss the graphs (i) Actual pressure Vs true pressure (ii) Actual pressure Vs Error

**Procedure**

1. A standard weight of  $0.5 \text{ Kg/cm}^2$  is kept on the piston plate form.
2. Pressure is applied to the chamber containing oil by rotating the hand operated wheel in the anti clock wise direction.
3. This is continued until piston carrying weight shows a list.
4. In the movement the pressure acts equally on the piston as well as on the gauge.
5. The reading shown by the gauge is taken as actual reading.
6. The same procedure is repeated for increasing weights on the platform in steps of  $0.5 \text{ Kg/cm}^2$  and actual reading shown by the gauge is noted down.
7. Graphs are drawn between
  - i. Actual pressure Vs true pressure.
  - ii. Actual pressure Vs Error.

**Equipment**

1. Dead weight tester - 1 No
2. Pressure gauge and standard weight - 1 No

**3. Torque Measurement****Aim**

To determine the due to dead weights using strain torsion meter and to determine the unknown weight.

**Exercise**

Find the % error of the torque measurement.

**Procedure**

1. Connect the strain gauge torsion meter to the power supply.
2. Now change or hanger is fixed to the shift, the torque is to subject.
3. Now keep the dead weights in the hanger gently.
4. Note the indicated torque value from the strain gauge torsion indicator.
5. Repeat the same for different weights (say 1Kg, 2Kg,) and tabulate the readings.
6. Now repeat the same procedure for the given unknown weight.
7. The unknown weight is interpreted from graph.

**Equipment**

1. Strain gauge torsion meter – 1 No
2. Dead weight – 1 No

**4. Measurement of Viscosity Using Saybolt Viscometer****Aim**

To measure the viscosity using saybolt viscometer.

**Exercise**

Measure the viscosity using saybolt viscometer and draw the graph between voltage on x-axis and dynamo viscosity on y-axis.

#### **Procedure**

1. Viscosity determination shall be done in room free from dust rapid changes in temperature.
2. The oil in the cup and allow it to drain.
3. Pour oil in the cup and allow it to drain.
4. The cork stopper should be installed at the lower end of the tube.
5. The cork should be tight enough to prevent escape of oil.
6. Since the oil should be stirred well until a constant temperature is maintained both in the water and the oil.
7. After thermal equilibrium has been obtained.
8. Remove the thermometer from the oil bath.
9. 60ml of flask should be kept in position to collect oil from the tube.
10. Open the cork and start the stopwatch.
11. Record the time for the fall of 60mm of oil.
12. Vary the temperature of oil using temperature controller record the actual temperature.
13. Draw the graph between voltage on x-axis and dynamo viscosity on y-axis.

#### **Equipment**

1. Thermometer – 1 No
2. Stop watch – 1 No
3. 60ml flask – 1 No
4. Water – 1 No

### **5. Vacuum pressure measurement**

#### **Aim**

To study the vacuum pressure gauge setup and measure the unknown vacuum pressure.

#### **Exercise**

- i. Maintain the vacuum pressure in the cylinder and switch on the vacuum pressure transmitter setup.
- ii. Measure the output voltage in Volts for the corresponding vacuum pressure in mbars.
- iii. Vary the vacuum pressure in cylinder and follow the step 2 for different values.
- iv. Draw the graph between output voltage Vs. vacuum pressure in mbars.

#### **Equipment**

Vacuum pressure setup  
Vacuum pressure transmitter  
Voltmeter

### **6. Level Measurement Using DPT**

#### **Aim**

To measure the level of liquid in the tank with the differential pressure transmitter and to calibrate the zero and span of the level in terms of 4-20 mA.

#### **Exercise**

Measure the liquid level and calibrate it in terms of 4-20 mA.

#### **Procedure**

- a) Weigh the empty container and calibrate the zero level to 4mA.
- b) Fill the container with the water and calibrate the full level to 20mA.

- c) Now perform the experiment in the ascending order in steps of 5cms.
- d) Repeat the same procedure for the descending order.
- e) Tabulate the readings.
- f) Draw the hastenis

#### **Equipment**

1. DPT - 1 No
2. Container - 1 No

### **7. UV-Visible Spectrophotometer**

#### **Aim**

To find out the absorbance, % of transmittance and concentration for a given test solution, using UV spectrophotometer.

#### **Exercise**

Find out the absorbance, % of transmittance and concentration of the given Test solutions.

#### **Procedure**

1. Switch on the UV-spectrophotometer.
2. Switch on the lamp by electing the names of rating disc.
3. Place the reference solution in the first column of rotating disc.
4. Use any other column to place the test solution.
5. Select the operating mode. There are 4 types of operating modes:
  - i. Single wavelength
  - ii. Multiple wavelength
  - iii. Scanning mode
  - iv. Time scan mode
6. Select the mode. The 3 parameters to be measures are absorbance, % of transmittance and concentration for a given test solution.  
Note down the result from the 1<sup>st</sup> parameter.

#### **Equipment**

1. UV spectrophotometer – 1 No.
2. Cuvettes

### **8. IR – Spectrophotometer**

#### **Aim**

**To measure and analyze the absorbance, percentage transmission concentration of the given samples using IR spectroscopy**

#### **Exercise**

\*wait for 30 minutes for IR source to be operated, then take the readings.

#### **For IR wavelength is ABOVE 300nm :**

Place reference sample in CELL No 2.

Place the sample to be analyzed in cell NO 1 or 3 or 4 or 5

#### **Single wave length:**

As the name suggests, this mode is used t take readings at one wave length. Depends on the absorbance mode, transmittance mode, concentration mode the data will be

displayed on the monitor. Each subsequent data can be transferred just by pressing Key of 117. After completion of the data transfer, Press ESC key to stop the reception.

**Multi wavelength analysis:**

This mode is similar to single wave length except that it takes readings at more than one wavelength. With this mode, readings can be taken at minimum 2 discrete readings and maximum 8 discrete wavelength. Any 8 wavelength can be selected in the range 200nm to 1000nm. Note the maximum wavelength of absorption .

**Equipment**

1. IR spectrophotometer sl-117
2. cuvette
3. Solution
4. Printer

**9. pH – Meter Measurement of  $p^H$  - value of Test Solutions**

**Aim**

To measure the  $P_H$  values of the test solutions using pH-meter.

**Exercise**

Find the pH values of the test solutions.

**Procedure**

1. Switch on the  $P_H$  meter
2. Connect the glass electrode to the  $P_H$ -meter
3. Take distilled water in a beaker and insert electrode in the beaker
4. The  $P_H$  meter should show approximately test solutions. If Acidic than the  $P_H$  is  $< 7$  and if alkaline than the  $P_H > 7$

**Equipment**

1. pH meter – 1 No.
2. Test solutions – few types
3. Beaker – 2 Nos.
4. Stand – 1 No.

**10. Measurements of conductivity of test solutions.**

**Aim**

To measure the conductivity of the given solution.

**Exercise**

- (i) Solution under test is taken in a beaker.
- (ii) Electrode is immersed into the solution
- (iii) The electrode terminal is connected to display unit.
- (iv) Digital display shows the conductivity of the given solution in mho
- (v) Repeat the procedure for different samples.
- (vi) Switch on the supply.

**Equipment**

- (i) Solution under test.
- (ii) Conductivity electrode
- (iii) Conductivity meter setup with display.

**AIM**

To provide basic knowledge of controllers, find control elements and the processes.

**OBJECTIVES**

- i. To study the basic characteristics of first order and higher order processes.
- ii. To get adequate knowledge about the characteristics of various controller modes and methods of tuning of controller.
- iii. To study about various complex control schemes.
- iv. To study about the construction, characteristics and application of control valves.
- v. To study the five selected unit operations and a case study of distillation column control

**UNIT I INTRODUCTION 9**

Need for process control – mathematical model of first order level, pressure and thermal processes – higher order process – interacting and non-interacting systems – continuous and batch processes – self-regulation – servo and regulator operations.

**UNIT II CONTROL ACTIONS AND CONTROLLERS 9**

Basic control actions – characteristics of on-off, proportional, single-speed floating, integral and derivative control modes – P+I, P+D and P+I+D control modes – pneumatic and electronic controllers to realize various control actions.

**UNIT III OPTIMUM CONTROLLER SETTINGS 9**

Evaluation criteria – IAE, ISE, ITAE and  $\frac{1}{4}$  decay ratio – determination of optimum settings for mathematically described processes using time response and frequency response – Tuning – Process reaction curve method – Ziegler Nichols method – Damped oscillation method.

**UNIT IV MULTILoop CONTROL 9**

Feed-forward control – ratio control- cascade control – inferential control – split-range control – introduction to multivariable control – examples from distillation column and boiler systems.

**UNIT V FINAL CONTROL ELEMENT 9**

I/P converter – pneumatic and electric actuators – valve positioner – control valves – characteristics of control valves – inherent and installed characteristics – valve body – commercial valve bodies – control valve sizing – cavitation and flashing – selection criteria.

**AIM**

To contribute to the knowledge of Fibre optics and Laser Instrumentation and its Industrial and Medical Application.

**OBJECTIVES**

To expose the students to the basic concepts of optical fibres and their properties.

To provide adequate knowledge about the Industrial applications of optical fibres.

To expose the students to the Laser fundamentals.

To provide adequate knowledge about Industrial application of lasers.

To provide adequate knowledge about holography and Medical applications of Lasers.

**UNIT I OPTICAL FIBRES AND THEIR PROPERTIES 12**

Principles of light propagation through a fibre - Different types of fibres and their properties, fibre characteristics – Absorption losses – Scattering losses – Dispersion – Connectors and splicers – Fibre termination – Optical sources – Optical detectors.

**UNIT II INDUSTRIAL APPLICATION OF OPTICAL FIBRES 6**

Fibre optic sensors – Fibre optic instrumentation system – Different types of modulators – Interferometric method of measurement of length – Moire fringes – Measurement of pressure, temperature, current, voltage, liquid level and strain.

**UNIT III LASER FUNDAMENTALS 9**

Fundamental characteristics of lasers – Three level and four level lasers – Properties of laser – Laser modes – Resonator configuration – Q-switching and mode locking – Cavity damping – Types of lasers – Gas lasers, solid lasers, liquid lasers, semiconductor lasers.

**UNIT IV INDUSTRIAL APPLICATION OF LASERS 9**

Laser for measurement of distance, length, velocity, acceleration, current, voltage and Atmospheric effect – Material processing – Laser heating, welding, melting and trimming of material – Removal and vaporization.

**UNIT V HOLOGRAM AND MEDICAL APPLICATIONS 9**

Holography – Basic principle - Methods – Holographic interferometry and application, Holography for non-destructive testing – Holographic components – Medical applications of lasers, laser and tissue interactive – Laser instruments for surgery, removal of tumors of vocal cards, brain surgery, plastic surgery, gynaecology and oncology.

**ADVANCED CONTROL SYSTEM**

**L T P C  
3 0 0 3**

**AIM**

To gain knowledge in state variable analysis, non-linear systems and optimal control.

**OBJECTIVES**

- i To study the state variable analysis
- ii To provide adequate knowledge in the phase plane analysis.
- iii To give a basic knowledge in describing function analysis.
- iv To analyze the stability of the systems using different techniques.
- v To study the design of optimal controller.

**UNIT I STATE VARIABLE ANALYSIS 9**

Concept of state – State Variable and State Model – State models for linear and continuous time systems – Solution of state and output equation – controllability and observability - Pole Placement – State observer Design of Control Systems with observers.

**UNIT II PHASE PLANE ANALYSIS 9**

Features of linear and non-linear systems - Common physical non-linearities – Methods of linearising non-linear systems - Concept of phase portraits – Singular points – Limit cycles – Construction of phase portraits – Phase plane analysis of linear and non-linear systems – Isocline method.

**UNIT III DESCRIBING FUNCTION ANALYSIS 9**

Basic concepts, derivation of describing functions for common non-linearities – Describing function analysis of non-linear systems – Conditions for stability – Stability of oscillations.

**UNIT IV STABILITY ANALYSIS 9**

Introduction – Liapunov's stability concept – Liapunov's direct method – Lure's transformation – Aizerman's and Kalman's conjecture – Popov's criterion – Circle criterion.

**UNIT V OPTIMAL CONTROL 9**

Introduction -Decoupling - Time varying optimal control – LQR steady state optimal control – Optimal estimation – Multivariable control design.

**DIGITAL SIGNAL PROCESSING**

**L T P C**  
**3 1 0 4**

### AIM

To introduce the concept of analyzing discrete time signals & systems in the time and frequency domain.

### OBJECTIVES

- To classify signals and systems & their mathematical representation.
- To analyse the discrete time systems.
- To study various transformation techniques & their computation.
- To study about filters and their design for digital implementation.
- To study about a programmable digital signal processor & quantization effects.

### UNIT I INTRODUCTION

**9**

Classification of systems: Continuous, discrete, linear, causal, stable, dynamic, recursive, time variance; classification of signals: continuous and discrete, energy and power; mathematical representation of signals; spectral density; sampling techniques, quantization, quantization error, Nyquist rate, aliasing effect. Digital signal representation.

### UNIT II DISCRETE TIME SYSTEM ANALYSIS

**9**

Z-transform and its properties, inverse z-transforms; difference equation – Solution by z-transform, application to discrete systems - Stability analysis, frequency response – Convolution – Fourier transform of discrete sequence – Discrete Fourier series.

### UNIT III DISCRETE FOURIER TRANSFORM & COMPUTATION

**9**

DFT properties, magnitude and phase representation - Computation of DFT using FFT algorithm – DIT & DIF - FFT using radix 2 – Butterfly structure.

### UNIT IV DESIGN OF DIGITAL FILTERS

**9**

FIR & IIR filter realization – Parallel & cascade forms. FIR design: Windowing Techniques – Need and choice of windows – Linear phase characteristics. IIR design: Analog filter design - Butterworth and Chebyshev approximations; digital design using impulse invariant and bilinear transformation - Warping, prewarping - Frequency transformation.

### UNIT V DIGITAL SIGNAL PROCESSORS

**9**

Introduction – Architecture – Features – Addressing Formats – Functional modes - Introduction to Commercial Processors

**L = 45 T = 15 TOTAL = 60 PERIODS**

**EMBEDDED SYSTEM**

**L T P C**  
**3 0 0 3**

### AIM

To understand the basic concepts of embedded system design and its applications to various fields.

### OBJECTIVES

To provide a clear understanding of

- Embedded system terminologies and its devices.
- Various Embedded software Tools
- Design and architecture of Memories.
- Architecture of processor and memory organizations.
- Input/output interfacing
- Various processor scheduling algorithms.
- Basics of Real time operating systems.
- Introduction to PIC and its applications

### **UNIT I INTRODUCTION TO EMBEDDED SYSTEMS 9**

Introduction to embedded real time systems – The build process for embedded systems – Embedded system design process-Embedded computory applications-Types of memory – Memory management methods.

### **UNIT II EMBEDDED SYSTEM ORGANIZATION 9**

Structural units in processor , selection of processor & memory devices – DMA – I/O devices : timer & counting devices – Serial communication using I<sup>2</sup>C , CAN USB buses – Parallel communication using ISA , PCI ,PCI/X buses – Device drivers

### **UNIT III PROGRAMMING AND SCHEDULING 9**

Intel I/O instructions – Synchronization - Transfer rate, latency; interrupt driven input and output - Nonmaskable interrupts, software interrupts, Preventing interrupts overrun - Disability interrupts. Multithreaded programming –Context Switching, Preemptive and non-preemptive multitasking, semaphores. Scheduling-thread states, pending threads, context switching

### **UNIT IV REAL-TIME OPERATING SYSTEMS 9**

Introduction to basic concepts of RTOS, Unix as a Real Time Operating system – Unix based Real Time operating system - Windows as a Real time operating system – POSIX – RTOS-Interrupt handling - A Survey of contemporary Real time Operating

systems:PSOS, VRTX, VxWorks, QNX, 4C/OS-II, RT Linux – Benchmarking Real time systems - Basics,

**UNIT V PIC MICROCONTROLLER BASED EMBEDDED SYSTEM DESIGN 9**  
PIC microcontroller – MBasic compiler and Development boards – The Basic Output and digital input – Applications

**CONTROL SYSTEM LABORATORY**

**L T P C  
0 0 3 2**

1. Determination of transfer function of DC Servomotor
2. Determination of transfer function of AC Servomotor.
3. Analog simulation of Type - 0 and Type – 1 systems
4. Determination of transfer function of DC Generator
5. Determination of transfer function of DC Motor
6. Stability analysis of linear systems
7. DC and AC position control systems
8. Stepper motor control system
9. Digital simulation of first systems
10. Digital simulation of second systems

**TOTAL : 45 PERIODS**

**Detailed Syllabus**

1. **Determination of Transfer Function Parameters of a DC Servo Motor**

**Aim**

To derive the transfer function of the given D.C Servomotor and experimentally determine the transfer function parameters

**Exercise**

1. Derive the transfer function from basic principles for a separately excited DC motor.
2. Determine the armature and field parameters by conducting suitable experiments.
3. Determine the mechanical parameter by conducting suitable experiments.
4. Plot the frequency response.

**Equipment**

- |    |  |         |
|----|--|---------|
| 1. | DC servo motor field separately excited – loading facility – variable voltage source | : 1 No  |
| 2. | Tachometer   | : 1 No  |
| 3. | Multimeter   | : 2 Nos |
| 4. | Stop watch   | : 1 No  |

**2. Determination of Transfer Function Parameters of AC Servo Motor****Aim**

To derive the transfer function of the given A.C Servo Motor and experimentally determine the transfer function parameters

**Exercise**

1. Derive the transfer function of the AC Servo Motor from basic Principles.
2. Obtain the D.C gain by operating at rated speed.
3. Determine the time constant (mechanical)
4. Plot the frequency response

**Equipment**

- |    |                |   |
|----|----------------|---|
| 1. | AC Servo Motor | : Minimum of 100w – necessary sources for main winding and control winding – 1 No |
| 2. | Tachometer     | : 1 No  |
| 3. | Stopwatch      | : 1 No  |
| 4. | Voltmeter      | : 1 No  |

**3. Analog Simulation Of Type-0 And Type-1 System****Aim**

To simulate the time response characteristics of I order and II order, type 0 and type-1 systems.

**Exercise**

1. Obtain the time response characteristics of type – 0 and type-1, I order and II order systems mathematically.

2. Simulate practically the time response characteristics using analog rigged up modules.
3. Identify the real time system with similar characteristics.

**Equipment**

1. Rigged up models of type-0 and type-1 system using analog components.
2. Variable frequency square wave generator and a normal CRO - 1 No  
(or)  
DC source and storage Oscilloscope - 1 No

**4. Determination of Transfer function of DC Generator**

**Aim**

To determine the transfer function of DC generator

**Exercise**

1. Obtain the transfer function of DC generator by calculating  $\tau$  and gain

**Equipment**

1. DC Generator
2. Tachometer
3. Various meters
4. Stop watch

**5. Determination of Transfer function of DC Motor**

**Aim**

To determine the transfer function of DC motor

**Exercise**

1. Obtain the transfer function of DC motor by calculating  $\tau$  and gain

**Equipment**

1. DC Motor
2. Tachometer
3. Various meters
4. Stop watch

**6. Stability Analysis of Linear Systems**

**Aim**

To analyse the stability of linear systems using Bode / Root locus / Nyquist plot

**Exercise**

1. Write a program to obtain the Bode plot / Root locus / Nyquist plot for the given system
2. Assess the stability of the given system using the plots obtained
3. Compare the usage of various plots in assessing stability

**Equipment**

1. System with MATLAB / MATHCAD / equivalent software - 3 user license

**7. DC and AC position Control system**

**Aim**

To study the AC and DC position control system and draw the error characteristics between setpoint and error.

**Exercise**

1. To study various positions and calculate the error between setpoint and output position
2. To measure outputs at various points (between stages)

**Equipment**

1. AC and DC position control kit with DC servo motor.
2. Power transistor
3. Adder

**8. Stepper Motor Control System****Aim**

To study the working of stepper motor

**Exercise**

1. To verify the working of the stepper motor rotation using microprocessor.

**Equipment**

1. Stepping motor
2. Microprocessor kit
3. Interfacing card
4. Power supply

**9. Digital Simulation of First order System****Aim**

To digitally simulate the time response characteristics of first -order system

**Exercise**

1. Write a program or build the block diagram model using the given software.
2. Obtain the impulse, step and sinusoidal response characteristics.
3. Identify real time systems with similar characteristics.

**Equipment**

1. System with MATLAB / MATHCAD (or) equivalent software - minimum 3 user license.

**10. Digital Simulation of Second order Systems****Aim**

To digitally simulate the time response characteristics of second -order system

**Exercise**

1. Write a program or build the block diagram model using the given software.

2. Obtain the impulse, step and sinusoidal response characteristics.
3. Identify real time systems with similar characteristics.

**Equipment**

System with MATLAB / MATHCAD (or) equivalent software - minimum 3 user license.

**EI2356**

**PROCESS CONTROL SYSTEM LABORATORY**

**L T P C**

**0 0 3 2**

**OBJECTIVE**

To experimentally verify the process control concepts on the selected process control loops.

1. Operation of interacting and non-interacting systems
2. Responses of different order processes with and without transportation lag
3. Response of on-off controller
4. Response of P+I+D controller
5. Characteristics of control valve with and without positioner
6. Operation of on-off controlled thermal process
7. Closed loop response of flow control loop
8. Closed loop response of level control loop
9. Closed loop response of temperature control loop
10. Closed loop response of pressure control loop
11. Tuning of controllers
12. Study of complex control system (ratio / cascade / feed forward)

**TOTAL : 45 PERIODS**

**Detailed Syllabus**

**1. Study of interacting and non- interacting systems**

**Aim**

To study the operation of interacting and non- interacting systems

**Exercise**

1. Connect the two tank system (Level process) in series (as non- interacting system)
2. Check whether level in tank is affected due to changes made in the second tank.
3. Connect the two tank system in series (as interfacing as system).
4. Check whether level in tank 1 is affected due to changes made in the second tank.
5. Determine the transfer function of individual and overall system.

### **Equipment**

1. Two tank system with provision for making them as interfacing and non-interfacing. – 1 No
2. Level transmitters – 1 No
3. Recorder – 1 No

## **2. Response of different order processes with and without transportation delay**

### **Aim**

To determine the transient response of a first order process with and without transportation delay and second order process with and without transportation delay to step change in input.

### **Exercise**

1. Record the transient response to a step change of first order process and second order process (Level or thermal (or) any process) with and without transportation lag.
2. Calculate the process gain, time constant and dead time of the process from the step response.

### **Equipment**

1. Two tank system with provision for transportation delay (Non – interacting process)
2. Level transmitter – 1 No
3. Recorder – 1 No

## **3. Response of P+I+D controller**

### **Aim**

To investigate the operation of an electronic controllers with P, P+I and P+I+D action.

### **Exercise**

1. Plot the response of P, P+I, P+D and P+I+D controllers to step and ramp inputs.
2. Determine the calibration of the proportional, Integral and derivative adjustments.

### **Equipment**

1. Electronic PID controller – 1 No
2. Source for generating step and ramp inputs – 1 No
3. Recorder – 1 No
4. Digital Multimeter – 1 No

## **4. Characteristics of control valve with and without valve positioner**

### **Aim**

To determine the flow – lift characteristics (Internet / Installed) of a control valve equipped with and without valve positioner.

### **Exercise**

1. Plot the flow – lift characteristics of the given valve without positioner keeping
  - (i) Constant  $\Delta P$
  - (ii) Variable  $\Delta P$
2. Compute the valve gain at different operating points.
3. Plot the flow – lift characteristics of the given with positioner keeping.
  - i. Constant  $\Delta P$
  - ii. Variable  $\Delta P$
4. Compute the valve gain at different operating points.

**Equipment**

1. Control valve trainer (with position for varying  $\Delta P$  across the valve) - 1 No
2. Flowmeter - 1 No

**5 Closed loop response of flow control loop****Aim**

To obtain the closed loop response of flow control loop for servo and regulator Operation.

**Exercise**

1. Closed – loop connection is made in the flow process station.
2. The flow controller (P+I) is tuned using any one of the tuning techniques.
3. The response of the control loop is obtained for changes in the set point.
4. The response of the control loop is obtained for changes in the load variable.
5. The step 3 and 4 are repeated for different controller modes and settings.

**Equipment**

1. Flow process station with all accessories - 1 No
2. Analog / Digital PID controller - 1 No
3. Recorder - 1 No

**6. Closed loop response of level control loop****Aim**

To obtain the closed loop response of level control loop for servo and regulator operation.

**Exercise**

1. Closed loop connection is made in the level process station.
2. The level controller (P+I) is tuned using any one of the tuning techniques.
3. The response of the control loop is obtained for changes in the set point.
4. The response of the control loop is obtained for changes in the load variable.
5. The step 3 and step 4 are repeated for different controller modes and settings.

**Equipment**

1. Level process station with all accessories - 1 No
2. Analog / Digital PID controller - 1 No
3. Recorder - 1 No

**7. Closed loop response of temperature control loop****Aim**

To obtain the closed loop response of temperature control loop for servo and regulator operation.

**Exercise**

1. Closed-loop connection is made in the temperature process station.
2. The temperature controller (P+I+D) is tuned using any one of the tuning techniques.
3. The response of the control loop is obtained for changes in the set point.
4. The response of the control loop is obtained for changes in the load variable.
5. The step 3 and 4 are repeated for different controller modes and settings.

**Equipment**

1. Temperature process station with all accessories - 1 No
2. Analog / Digital PID controller - 1 No

3. Recorder

- 1 No

## 8. Closed loop response of pressure control loop

### Aim

To obtain the closed loop response of pressure control loop for servo and regulator operation.

### Exercise

1. Closed – loop connection is made in the pressure process station.
2. The pressure controller (P+I) is tuned using any one of the tuning techniques.
3. The response of the control loop is obtained for changes in the set point.
4. The response of the control loop is obtained for changes in the load variable.
5. The step 3 and 4 are repeated for different controller modes and settings.

### Equipment

1. Pressure process station with all accessories - 1 No
2. Analog / Digital PID controller - 1 No
3. Recorder - 1 No

## 9. Tuning of PID controller

### Aim

To determine the controller settings of a given process using two popular tuning techniques.

### Exercise

1. Plot the process reaction curve for the given process (higher order process)
2. From the reaction curve, calculate the process gain, time constant and dead time using the above process parameters calculate the  $K_c$ ,  $T_i$ ,  $T_d$  valves using the appropriate thumb rules.
3. Conduct the closed loop test as per Z-N method [continuous cycling method] and determine the ultimate gain ( $K_u$ ) and ultimate period ( $P_u$ ), calculate the controller parameters ( $K_c$ ,  $T_i$ ,  $T_d$ ) using Ziegler Nichol's closed loop tuning approach.

### Equipment

1. Process control trainer / real time process (level / thermal process) - 1 No
2. Recorder - 1 No
3. PID controller - 1 No

## 10. Response of cascade control system

### Aim

To determine the closed loop performance of a cascade control system and compare it with that of conventional control system.

### Exercise

1. The secondary and primary controllers are tuned using any one of the tuning techniques.
2. Obtain the closed loop response of cascade control system with the load variable entering the inner loop.
3. Obtain the closed loop regulating response with conventional control system.
4. Compare the performance of conventional control system and cascade control system internal of peak overshoot, setting time, I&E etc

### Equipment

1. Cascade control system with flow as inner variable and liquid level as outer variable with following accessories.
2. Level transmitter - 1 No
3. Flow transmitter - 1 No
4. Control valve - 1 No
5. Analog / Digital PID controller - 1 No
6. Recorder - 1 No

**EI2357**

**VIRTUAL INSTRUMENTATION LAB**

**L T P C  
0 0 3 2**

1. Creating Virtual Instrumentation for simple applications
2. Programming exercises for loops and charts
3. Programming exercises for clusters and graphs.
4. Programming exercises on case and sequence structures, file Input / Output.
4. Data acquisition through Virtual Instrumentation.
6. Developing voltmeter using DAQ cards.
7. Developing signal generator using DAQ cards.
8. Simulating reactor control using Virtual Instrumentation.
9. Real time temperature control using Virtual Instrumentation.
10. Real time sequential control of any batch process.

**TOTAL : 45 PERIODS**

**LABORATORY REQUIREMENTS FOR BATCH OF 30 STUDENTS**

<b>Sl.No.</b>	<b>Specifications</b>	<b>Qty</b>
1.	Laboratory Virtual Instrumentation Engineering Software Package	30 users License
2.	PCI /USB DAQ Boards	2 Nos.
3.	Temperature Control Test Rig using Laboratory Virtual Instrumentation Engineering Software Package and Hardware Models	1 No.
4.	Sequential Control using Laboratory Virtual Instrumentation Engineering Software Package and Hardware Models.	1 No.

**AIM**

To provide sound knowledge on the principles of discrete data control system

**OBJECTIVES**

- i. To study the importance of sample data control system.
- ii. To give adequate knowledge about signal processing in digital control.
- iii. To study the importance of modeling of discrete systems and stability analysis of discrete data system.
- iv. To study the importance of state space representation for discrete data system.
- v. To introduce the design concept for digital controllers.

**UNIT I COMPUTER CONTROLLED SYSTEM 6**

Configuration of the basic digital control scheme – general sampled data system variables – signal classifications – why use digital control system – Advantages – disadvantages – examples of discrete data and digital control systems.

**UNIT II SIGNAL PROCESSING IN DIGITAL CONTROL 9**

Sampling process – Frequency domain analysis – ideal samples – Shanon's sampling theorem – generation and solution of process – linear difference equations – data reconstruction process – frequency domain characteristics.

**UNIT III DISCRETE SYSTEM MODELLING 9**

Determination of the  $Z$  transform – mapping between  $s$  and  $Z$  domains -  $Z$  transform of system equations – open loop Hybrid sampled Data Control Systems – open loop discrete Input Data Control System – closed loop sampled data control system – modified  $Z$  transform method – response between sampling instants – stability on the  $Z$  - plane and jury's stability test – steady state error analysis for stable systems.

**UNIT IV STATE VARIABLE ANALYSIS OF DIGITAL CONTROL SYSTEMS 9**

State descriptions of digital processors – conversion of state variable models to transfer functions – conversion of transfer functions to canonical state variable models – first companion form – second companion form – Jordon Canonical form – state description of sampled continuous time plants – solution of state difference equations – closed form solution – state transition matrix – Caley Hamilton Technique – concept of controllability and absorbability – loss of controllability and absorbability due to sampling.

**UNIT V DESIGN OF DIGITAL CONTROL: 12**

Digital PI, PD and PID Controller – Position and velocity forms – state regulator design – design of state observers – dead beat control by state feed back and dead beat observers.

**LOGIC AND DISTRIBUTED CONTROL SYSTEM**

**L T P C  
3 0 0 3**

**AIM**

To illustrate the concept of programmable logic controllers and distributed control system.

**OBJECTIVES**

- i. To give an introductory knowledge about PLC and the programming languages.
- ii. To give adequate knowledge about of application of PLC.
- iii. To give basic knowledge in the architecture and local control unit of distributed control system.
- iv. To give adequate information in the interfaces used in DCS.
- v. To give basic knowledge about Computer Controlled Systems.

**UNIT I                    PROGRAMMABLE LOGIC CONTROLLER                    9**

Evolution of PLC's – Components of PLC – Advantages over relay logic – Architecture of PLC– Programming devices - Discrete and Analog I/O modules – Programming languages — Ladder diagram – Programming timers and counters – Design of PLC.

**UNIT II                    APPLICATIONS OF PLC                    9**

Instructions in PLC – Program control instructions, math instructions, sequencer instructions – Use of PC as PLC – Application of PLC – Case study of bottle filling system.

**UNIT III                    COMPUTER CONTROLLED SYSTEMS                    9**

Basic building blocks of Computer controlled systems – SCADA – data Acquisition System – supervisory Control – Direct digital Control .

**UNIT IV                    DISTRIBUTED CONTROL SYSTEM                    9**

DCS - Architectures – Comparison – Local control unit – Process interfacing issues – Communication facilities.

**UNIT V                    INTERFACES IN DCS                    9**

Operator interfaces - Low level and high level operator interfaces – Operator displays - Engineering interfaces – Low level and high level engineering interfaces – General purpose computers in DCS.

**AIM**

To cater the knowledge of Neural Networks, Fuzzy Logic Control, Genetic Algorithm and Evolutionary Programming and their applications for controlling real time systems.

**OBJECTIVES**

- To expose the concepts of feed forward neural networks.
- To provide adequate knowledge about feed back neural networks.
- To teach about the concept of fuzziness involved in various systems.
- To provide adequate knowledge about fuzzy set theory.
- To expose the ideas of GA and EP in optimization and control.

**UNIT I ANN- INTRODUCTION 9**

Introduction – Biological neuron – Artificial neuron – Neuron modeling – Learning rules – Single layer – Multi layer feed forward network – Back propagation – Learning factors.

**UNIT II ANN - ARCHITECTURE AND APPLICATIONS 9**

Feedback networks – Discrete time Hopfield networks – Transient response of continuous time networks – Process modeling using ANN- Neuro controller for inverted pendulum.

**UNIT III FUZZY SYSTEMS 9**

Classical sets – Fuzzy sets – Fuzzy relations – Fuzzification - Membership functions – Defuzzification – Methods of defuzzification – Fuzzy rules.

**UNIT IV FUZZY LOGIC CONTROL 9**

Membership function – Knowledge base – Decision-making logic – Optimisation of membership function using neural networks – Adaptive fuzzy system.- FLC for inverted pendulum- Home heating system- Introduction to Neuro-fuzzy systems.

**UNIT V OPTIMIZATION TECHNIQUES 9**

Gradient Search – Non-gradient search – Genetic Algorithms: Operators, search algorithm, penalty – Evolutionary Programming: Operators, Search Algorithms

**ADVANCED CONTROL SYSTEMS LABORATORY**

**L T P C**  
**0 0 3 2**

1. Simulation of first order and second order system with and without dead time using discretization method and Runge – Kutta method
2. Design of Discrete P+I+D controller and Deadbeat controller for a first order system
3. State feedback control of a process by pole placement.
4. State estimation of a process using full order and reduced order observers.
5. Logic gates operations, Timing Operations, counter operations and math operations using PLC.
6. Control of Bottle filling system and sequential operation of motors using PLC.
7. PC based data acquisition report generation.
8. Simulation of complex control systems using matlab package.
9. Study of distributed control system.
10. Control of a given process using Real Time Embedded controller

**TOTAL : 45 PERIODS**

#### **Detailed Syllabus**

1. **Simulation of first order and second order system with and without dead time using discretization method and Runge – Kutta method**

##### **Aim**

To simulate a first order system and second order system with and without dead time using discretization method and Runge-Kutta method.

##### **Exercises**

1. Write a program in C language for a first order system and second order system with and without dead time using discretization method.
2. Write a program in C language for a first order system and second order system with and without dead time using Runge – Kutta method.
3. To analyse the responses for various standard forcing functions.

##### **Equipment**

Computer Pentium (3 or 4) - 1 No

2. **Design of Discrete P+I+D controller and Deadbeat controller for a first order system**

##### **Design of Discrete P+I+D controller**

##### **Aim**

To design a discrete P+I+D controller for a first order system

##### **Exercise**

1. Write a program in C for position form of control algorithm.
2. Write a program in C for velocity form of control algorithm.

3. Analysis of the responses by implementing the position and velocity form of control algorithms for the first order system.
4. How to select the sampling rate in a digital control loop.

**Equipment**

Pentium Computer (3 or 4) - 1 No

**Deadbeat controller for a first order system**

**Aim**

To design a deadbeat for a first order process.

**Objective**

To examine a different methodology for designing digital feedback controllers, which makes use of the computational flexibility, offered by a digital computer.

**Exercise**

1. Design of Deadbeat controller for a first order process and analyse the closed loop response using C language.
2. Analysis of closed loop responses to step changes in set point using deadbeat.

**Equipment**

Computer Pentium (3 or 4) - 1 No

**3. State feedback control of a process by pole placement.**

**Aim**

To design state feedback gain matrix by pole placement technique for a multivariable process .

**Exercise**

1. Write a program using any software package to find state feed back gain matrix.
2. Analysis of the responses by implementing the state feedback technique by pole placement for a multivariable process.

**Equipment**

Computer Pentium (3 or 4) - 1 No

**4. State estimation of a process using full order and reduced order observers**

**Aim**

To estimate the states of a multivariable process using full order and reduced order observers

**Exercise**

1. Write a program using any simulation software package to estimate the states using full order and reduced order observers.
2. Analysis of responses by implementing the designed observers for a multivariable process.

**Equipment**

Computer Pentium (3 or 4) - 1 No

**5. Logic gates operations, Timing Operations, counter operations and math operations using PLC**

**Aim**

To study the operation of Programmable logic controller.

**Exercise**

- 1..Implementation of the AND / OR gate using PLC.
2. Implementation of proportional (P) control system.
3. A program which sounds an alarm when a preset count value is reached.
4. A program sounds an alarm after a time delay.
- 5.A program which illustrates the use of flags and the flag instructions.

**Equipment**

1. PLC Unit - 1 No
2. Computer Pentium (3 or 4) - 1 No

**6. Control of Bottle filling system and sequential operation of motors using PLC.****Aim**

To study the control of bottle filling system using PLC and sequential operation of motors using PLC.

**Objectives**

1. Instead of achieving the desired control or automation through physical wiring of control devices, in PLC how it is achieved through a program of software.
2. To develop the programming skills for the industrial needs.
3. How to develop an interface between PLC and the bottle filling system.
4. How to develop an interface between PLC and sequential motors using PLC.

**Exercise**

1. To develop the ladder diagram for the bottle filling system.
2. To develop the ladder diagram for the sequential operation of motors using PLC.

**Equipment**

1. Computer Pentium (3 or 4) - 1 No
2. PLC - 1 No
3. Bottle filling system - 1 No

**7. PC based data acquisition report generation.****Aim**

To acquire real world signals using Data Acquisition card.

**Exercise**

Develop a program in C – language to acquire the data and display

**Equipment**

1. Data Acquisition card - 1 No
2. Computer Pentium (3 or 4) - 1 No

**8. Simulation of complex control systems using matlab package.****Aim**

To study the simulation of complex control systems using MATLAB package.

**Objective**

To examine the advanced control strategies like cascade control, feed forward plus feedback control, ratio control.

**Exercise**

1. To simulate cascade control, feed forward – feedback control using MAT LAB.
2. Compare the results of cascade control with conventional control.
3. To simulate a ratio control for a process to maintain a desired ratio.
4. Compare the results of feed forward – feedback with feedback control.

**Equipment**

1. Computer Pentium (3 or 4) - 1 No
2. MATLAB original licensed version 6.0.

**9. Study of distributed control system.****Aim**

To study the distributed control system

**Objectives**

1. To get the knowledge of communication interface between the controller and the server, server and the clients and the controller to the I/O units.
2. To know how the I/O connection with the process control station to the DCS I/O units.
3. To know how several LCU's is used to implement control strategies.
4. To know how the transmission of process data is connected to the high-level system elements (i.e. human interface and computing devices).
5. To know how the high – level element transmits information requests and control commands to the LCU's.
6. To know how the cost of plant wiring is reduced significantly by the few cables or buses used to implement the shared communication system.
7. To know how the transmission of process variables, controlled variables, alarm status information from the LCU's to the high – level interfaces and to low-level human interfaces in the system.`

**Exercise**

1. Using graphic and text features design different types of operator interaction pages, to suit different process stations available in process control lab.
2. Implement the various control actions like ON-OFF, Proportional, Proportional + Integral, Proportional +Derivative, Proportional + Derivative+Integral on different process stations available in process control lab.
3. Analyse the responses for set point and disturbance changes.

**Equipment**

1. Computer Pentium (3 or 4) - 1 No
2. DCS - 1 No

**EI2406**

**INSTRUMENTATION SYSTEM DESIGN LABORATORY**  
**(Any TEN experiments)**

**L T P C**  
**0 0 3 2**

Design of instrumentation amplifiers

Design of active filters

Design of regulated power supply

Design of V/I and I/V converters

Design of linearising circuit and cold – junction compensation circuit for thermocouples

Design of signal conditioning circuits for strain gauge and RTD

Design of orifice plate and rotameter

Design of control valve (sizing and flow – lift characteristic)

Design of PID controllers (using operational amplifier and microprocessor)

Piping and Instrumentation Diagram – case study  
Preparation of documentation of instrumentation project (process flow sheet, instrument index sheet and instrument specifications sheet  
Preparation of project scheduling (Job scheduling, installation procedure and safety regulations).

**TOTAL : 45 PERIODS**

### **Detailed Syllabus**

#### **1. Design and implementation of instrumentation amplifiers**

##### **Aim**

To design an instrumentation amplifier based on the three operational amplifier configuration with a differential gain of 100.

##### **Exercise**

1. Develop the instrumentation amplifier with differential gain of 100 and draw the input Vs output characteristics of the three operational amplifier based instrumentation amplifier and make a comment on the response.
2. Compare the performance characteristics of Instrumentation amplifiers with commercial Monolithic Instrumentation amplifier.

##### **Equipment**

1. Dual power supply – 1 No
2. Digital Multimeters – 1 No
3. Resistors – 10 No
4. Operational Amplifiers – 4 No
5. Any commercial Monolithic Instrumentation amplifier - 2 No

#### **2. Design and Implementation of Active filters**

##### **Aim**

To design an active first order / second order Butterworth type Low – Pass / High Pass / Band-pass filter with the following specifications.

Low pass filter : Cut – off frequency : 1 KHz

High pass filter : Cut – off frequency : 1 KHz

Band pass filter : Cut off frequency :  $1 \text{ KHz} < f_c < 5 \text{ KHz}$

##### **Exercise**

1. Develop an active Butterworth first order (or) second order low pass and / or high – pass, band pass filter and determine experimentally the frequency response.

##### **Equipment**

1. Dual power supply - 1 No
2. Operational amplifiers - 2 Nos
3. Resistors - 10 Nos
4. Capacitors - 10 Nos
5. Signal generator - 1 No
6. C.R.O - 1 No

#### **3. Design of Regulated Power Supply**

##### **Aim:-**

To Design a Regulated Power Supply.

**Equipment**

1. Diodes IN4007
2. 100  $\mu$ F, 10  $\mu$ F
3. IC 7805
4. Potentiometer
5. Ammeter and Voltmeter

**Exercise****Line Regulation**

1. Varying the Input Voltage (0 -15)V.
2. Note down the output voltage

**Load Regulation**

1. Connect a variable Potentiometer across the output of the RPS.
2. Vary the potentiometer and note down the corresponding output current and voltage.

**4. Design and Implementation of V/I and I/V converters****Aim**

To design a voltage to current converter and a current to voltage converter and verify the characteristics experimentally.

**Objectives**

1. To design a voltage to current converter (grounded load) with the following specification  
 Input voltage range : (0 – 5) V  
 Output current range : (4-20) mA (should be independent of load)
2. To design a current to voltage converter with the following specification  
 Input current range : (4-20) mA  
 Output voltage range : (0-5) V

**Exercise**

1. Determine experimentally the characteristics of voltage and current converter and plot output current versus input voltage and comment on the response.
2. Determine experimentally the characteristics of current to voltage converter and plot output voltage Vs input current and comment on the response.

**Equipment**

- |                           |         |
|---------------------------|---------|
| 1. Resistors              | - 10 No |
| 2. Operational amplifiers | - 5 No  |
| 3. Transistor (NPN / PNP) | - 2 No  |
| 4. Dual power supply      | - 1 No  |
| 5. Digital Multimeters    | - 2 No  |
| 6. Loop analyzer          | - 1 No  |

**5. Design of linearising circuit and cold – junction compensation circuit for thermocouples****Aim**

To design a cold – junction compensation circuit for thermocouple.

### **Objectives**

To design a automatic reference correction circuit for thermocouple.(A solid – state temperature sensor or RTD can be used for the cold function measurement)

### **Exercise**

1. Develop the circuit for reference junction compensation.
2. Keep the hot junction temperature at say 400<sup>0</sup>C.
3. Vary the cold – junction temperature from 30 – 90<sup>0</sup>C and observe the output voltage for with and without cold-junction compensation.
4. Plot the output voltage versus cold-junction temperature and comment on the response.

### **Equipment**

- |    |                       |          |

| 1. | Thermocouple          | - 1 Nos  |
| 2. | Operational amplifier | - 3 Nos  |
| 3. | AD – 590 or RTD       | - 1 Nos  |
| 4. | Resistors             | - 10 Nos |
| 5. | Dual power supply     | - 1 No   |
| 6. | Multimeters           | - 1 No   |

## **6. Design of Signal Conditioning Circuits for Strain Gauge**

### **Aim:**

To design Signal Conditioning Circuit for Strain Gauge.

Specification as follows

1. Input Range 0 to 1 Kg
2. Output Voltage 0 to 5 V
3. Device -Bourdon Strain Gauge (350 Ohm)

### **Equipment**

1. Bonded Strain Gauge
2. Loads (100 gm to 1 Kg)
3. Operational Amplifier
4. RPS
5. Resistors

### **Exercise:**

Develop Signal Conditioning Circuits for different loads and plot output voltage versus Load. Comment on Linearity

## **7. Design of Orifice Plate and Rotameter**

### **Design of Orifice Plate**

### **Aim:**

To Design an Orifice Plate for the given Specification.

### **Equipment**

1. Pump and Reservoir
2. Pipeline with Orifice plate
3. Collecting Tank

### **Exercise:**

1. Convert Electrical Signal to Differential Pressure
2. Determine the interval data

3. Calculate  $D/d$
4. Calculate sizing factor

### **Design of Rotameter**

#### **Aim:**

To Design a Rotameter for given Specification

#### **Equipment**

1. Pump and Reservoir
2. Pipeline with Orifice plate
3. Collecting Tank

#### **Exercise**

1. Switch On the Motor
2. Adjust the Rotameter to read the required flow rate.
3. Start the Timer
4. After 5 Min Note the Head in the tank.
5. Drain the tank.
6. Repeat the Procedure and Calculate  $C_d$  in each case

### **8. Control Valve Sizing**

#### **Aim:**

To design a Control Valve and Study the flow lift Characteristics

#### **Equipment:**

1. Linear Control Valve
2. On/OFF Control Valve
3. Air Regulator
4. Rotameter
5. Pump

#### **Exercise**

1. By varying the inlet pressure note down the stem moment value and the flow rate.
2. Draw the Graph for pressure Vs Flow rate, Stem Moment Vs Flow rate

### **9. Design of PID Controller**

#### **Design of PID Controller using Op-Amp**

#### **Aim:**

1. To study the response of P, PI, PD, PID Controllers using Op-Amp

#### **Equipment**

1. Signal Generator
2. IC 741
3. Resistors and Capacitors
4. CRO
5. Bread Board

#### **Exercise**

1. Design a Analog PID Controller for various values of  $K_p$ ,  $K_i$ ,  $K_d$
2. Apply the error Signal from signal Generator (Square, Sine)
3. Note down the response from the CRO.

#### **Design of PID Controller using Microprocessor**

#### **Aim:**

To study the response of P, PI, PD, PID Controllers using Microprocessor.

#### **Equipment**

1. Signal Generator
2. Microprocessor based kit with ADC and DAC Section
3. CRO

**Exercise:**

1. Enter the PID Algorithm in Microprocessor
2. Give the Error Signal to ADC Section of Microprocessor Kit.
3. Execute the Microprocessor Program
4. Note down the output response of PID Controller in the DAC Section  
Microprocessor Kit

**IC 2404****COMPREHENSION****L T P C  
0 0 2 1****AIM:**

To encourage the students to comprehend the knowledge acquired from the first Semester to Sixth Semester of B.E Degree Course through periodic exercise.

**MG2351****PRINCIPLES OF MANAGEMENT****L T P C  
3 0 0 3****UNIT I OVERVIEW OF MANAGEMENT****9**

Organization - Management - Role of managers - Evolution of Management thought - Organization and the environmental factors - Managing globally - Strategies for International Business.

**UNIT II PLANNING****9**

Nature and purpose of planning - Planning process - Types of plans – Objectives - - Managing by objective (MBO) Strategies - Types of strategies - Policies - Decision Making - Types of decision - Decision Making Process - Rational Decision Making Process - Decision Making under different conditions.

**UNIT III ORGANIZING****9**

Nature and purpose of organizing - Organization structure - Formal and informal groups / organization - Line and Staff authority - Departmentation - Span of control - Centralization and Decentralization - Delegation of authority - Staffing - Selection and Recruitment - Orientation - Career Development - Career stages – Training - Performance Appraisal.

**UNIT IV DIRECTING****9**

Creativity and Innovation - Motivation and Satisfaction - Motivation Theories Leadership - Leadership theories - Communication - Hurdles to effective communication - Organization Culture - Elements and types of culture - Managing cultural diversity.

**UNIT V CONTROLLING****9**

Process of controlling - Types of control - Budgetary and non-budgetary control techniques - Managing Productivity - Cost Control - Purchase Control - Maintenance Control - Quality Control - Planning operations.

**CS2411 OPERATING SYSTEM LT P C**  
**3 0 0 3**

**AIM**

To learn the various aspects of operating systems such as process management, memory management, file systems, and I/O management

**UNIT I PROCESSES AND THREADS 9**  
Introduction to operating systems – review of computer organization – operating system structures – system calls – system programs – system structure – virtual machines. Processes: Process concept – Process scheduling – Operations on processes – Cooperating processes – Interprocess communication – Communication in client-server systems. Case study: IPC in Linux. Threads: Multi-threading models – Threading issues. Case Study: Pthreads library

**UNIT II PROCESS SCHEDULING AND SYNCHRONIZATION 9**  
CPU Scheduling: Scheduling criteria – Scheduling algorithms – Multiple-processor scheduling – Real time scheduling – Algorithm Evaluation. Case study: Process scheduling in Linux. Process Synchronization: The critical-section problem – Synchronization hardware – Semaphores – Classic problems of synchronization – critical regions – Monitors. Deadlock: System model – Deadlock characterization – Methods for handling deadlocks – Deadlock prevention – Deadlock avoidance – Deadlock detection – Recovery from deadlock.

**UNIT III STORAGE MANAGEMENT 9**

Memory Management: Background – Swapping – Contiguous memory allocation –Paging – Segmentation – Segmentation with paging. Virtual Memory: Background – Demand paging – Process creation – Page replacement – Allocation of frames – Thrashing. Case Study: Memory management in Linux

**UNIT IV FILE SYSTEMS 9**

File-System Interface: File concept – Access methods – Directory structure – File -system mounting – Protection. File-System Implementation : Directory implementation – Allocation methods – Free-space management – efficiency and performance – recovery – log-structured file systems. Case studies: File system in Linux – file system in Windows XP

**UNIT V I/O SYSTEMS 9**

I/O Systems – I/O Hardware – Application I/O interface – kernel I/O subsystem – Streams – performance. Mass-Storage Structure: Disk scheduling – Disk management – Swap-space management – RAID – disk attachment – stable storage – tertiary storage. Case study: I/O in Linux

**CS2070 VISUAL LANGUAGES AND APPLICATION LT P C  
3 0 0 3**

**AIM**

To study the principles and techniques of windows programming using MFC, procedures, resources, controls and database programming through the visual languages, Visual C++ and Visual Basic.

**OBJECTIVES**

- i. To study about the concepts of windows programming models, MFC applications, drawing with the GDI, getting inputs from Mouse and the Keyboard.
- ii. To study the concepts of Menu basics, menu magic and classic controls of the windows programming using VC++.
- iii. To study the concept of Document/View Architecture with single & multiple document interface, toolbars, status bars and File I/O Serialization.
- iv. To study about the integrated development programming event driven programming, variables, constants, procedures and basic ActiveX controls in visual basic.
- v. To understand the database and the database management system, visual data manager, data bound controls and ADO controls in VB.

**EI2021**

**POWER PLANT INSTRUMENTATION**

**L T P C**  
**3 0 0 3**

### **UNIT I OVERVIEW OF POWER GENERATION**

**9**

Brief survey of methods of power generation – hydro, thermal, nuclear, solar and wind power – importance of instrumentation in power generation – thermal power plants – building blocks – details of boiler processes UP&I diagram of boiler – cogeneration.

### **UNIT II MEASUREMENTS IN POWER PLANTS**

**9**

Electrical measurements – current, voltage, power, frequency, power – factor etc. – non electrical parameters – flow of feed water, fuel, air and steam with correction factor for temperature – steam pressure and steam temperature – drum level measurement – radiation detector – smoke density measurement – dust monitor.

### **UNIT III ANALYZERS IN POWER PLANTS**

**9**

Flue gas oxygen analyser – analysis of impurities in feed water and steam – dissolved oxygen analyser – chromatography – PH meter – fuel analyser – pollution monitoring instruments.

### **UNIT IV CONTROL LOOPS IN BOILER**

**9**

Combustion control – air/fuel ratio control – furnace draft control – drum level control – main stem and reheat steam temperature control – superheater control – attemperator – deaerator control – distributed control system in power plants – interlocks in boiler operation.

### **UNIT V TURBINE – MONITORING AND CONTROL**

**9**

Speed, vibration, shell temperature monitoring and control – steam pressure control – lubricant oil temperature control – cooling system

**TOTAL: 45 PERIODS**

### **TEXT BOOKS**

1. Sam G. Dukelow, The control of Boilers, instrument Society of America, 1991.
2. Modern Power Station Practice, Vol.6, Instrumentation, Controls and Testing, Pergamon Press, Oxford, 1971.

**UNIT II PREPARATION METHODS 10**

Bottom-up Synthesis-Top-down Approach: Precipitation, Mechanical Milling, Colloidal routes, Self-assembly, Vapour phase deposition, MOCVD, Sputtering, Evaporation, Molecular Beam Epitaxy, Atomic Layer Epitaxy, MOMBE.

**UNIT III PATTERNING AND LITHOGRAPHY FOR NANOSCALE DEVICES 5**

Introduction to optical/UV electron beam and X-ray Lithography systems and processes, Wet etching, dry (Plasma /reactive ion) etching, Etch resists-dip pen lithography

**UNIT IV PREPARATION ENVIRONMENTS 10**

Clean rooms: specifications and design, air and water purity, requirements for particular processes, Vibration free environments: Services and facilities required. Working practices, sample cleaning, Chemical purification, chemical and biological contamination, Safety issues, flammable and toxic hazards, biohazards.

**UNIT V CHARECTERISATION TECHNIQUES 10**

X-ray diffraction technique, Scanning Electron Microscopy - environmental techniques, Transmission Electron Microscopy including high-resolution imaging, Surface Analysis techniques- AFM, SPM, STM, SNOM, ESCA, SIMS-Nanoindentation

**TOTAL : 45 PERIODS**

**TEXT BOOKS**

**IC2021**

**OPTIMAL CONTROL**

**L T P C  
3 0 0 3**

**UNIT I INTRODUCTION 9**

Statement of optimal control problem – Problem formulation and forms of optimal control – Selection of performance measures- Necessary conditions for optimal control – ontryagin's minimum principle – State inequality constraints – Minimum time problem.

**UNIT II NUMERICAL TECHNIQUES FOR OPTIMAL CONTROL 9**

Numerical solution of 2-point boundary value problem by steepest descent and Fletcher Powell method solution of Ricatti equation by negative exponential and interactive methods

**UNIT III LQ CONTROL PROBLEMS AND DYNAMIC PROGRAMMING 9**

Linear optimal regulator problem – Matrix Riccati equation and solution method – Choice of weighting matrices – Steady state properties of optimal regulator – Linear tracking problem – LQG problem – Computational procedure for solving optimal control problems – Characteristics of dynamic programming solution – Dynamic programming application to discrete and continuous systems – Hamilton Jacobi Bellman equation.

**UNIT IV FILTERING AND ESTIMATION 9**

Filtering – Linear system and estimation – System noise smoothing and prediction – Gauss Markov discrete time model – Estimation criteria – Minimum variance estimation – Least square estimation – Recursive estimation.

**UNIT V KALMAN FILTER AND PROPERTIES 9**

Filter problem and properties – Linear estimator property of Kalman Filter – Time invariance and asymptotic stability of filters – Time filtered estimates and signal to noise ratio improvement – Extended Kalman filter – Case study: Boiler optimization and control.

**TOTAL : 45 PERIODS**

**EE2029 SYSTEM IDENTIFICATION AND ADAPTIVE CONTROL L T P C  
3 0 0 3**

**UNIT I NON PARAMETRIC METHODS 5**

Nonparametric methods: Transient analysis-frequency analysis-Correlation analysis-Spectral analysis.

**UNIT II PARAMETRIC METHODS 10**

Linear Regression: The Least square estimate-best linear unbiased estimation under linear constraints- updating the Parameter estimates for linear regression models-Prediction error methods: Description of Prediction error methods-Optimal Prediction – relationships between Prediction error methods and other identification methods-theoretical analysis. Instrumental variable methods: description of instrumental variable methods-theoretical analysis-covariance matrix of IV estimates- Comparison of optimal IV prediction error methods.

**UNIT III RECURSIVE IDENTIFICATION METHODS 10**

The recursive least squares method-the recursive Instrumental variable method-the recursive prediction error method-model validation and model structure determination. Identification of systems operating in closed loop: Identifiability considerations-direct identification-Indirect identification-joint input – output identification.

**UNIT IV ADAPTIVE CONTROL SCHEMES 10**

Introduction – users- Definitions-auto tuning-types of adaptive control-gain scheduling controller-model reference adaptive control schemes – self tuning controller. MRAC and STC : Approaches – The Gradient approach – Lyapunov functions – Passivity theory – pole placement method Minimum variance control – Predictive control.

**UNIT V ISSUES IN ADAPTIVE CONTROL AND APPLICATION 10**

Stability – Convergence – Robustness – Application of adaptive control.

**TOTAL : 45 PERIODS**

**ROBOTICS AND AUTOMATION**

**L T P C**  
**3 0 0 3**

### **UNIT I BASIC CONCEPTS**

**9**

Definition and origin of robotics – different types of robotics – various generations of robots – degrees of freedom – Asimov’s laws of robotics – dynamic stabilization of robots.

### **UNIT II POWER SOURCES AND SENSORS**

**9**

Hydraulic, pneumatic and electric drives – determination of HP of motor and gearing ratio – variable speed arrangements – path determination – micro machines in robotics – machine vision – ranging – laser – acoustic – magnetic, fiber optic and tactile sensors.

### **UNIT III MANIPULATORS, ACTUATORS AND GRIPPERS**

**9**

Construction of manipulators – manipulator dynamics and force control – electronic and pneumatic manipulator control circuits – end effectors – U various types of grippers – design considerations.

### **UNIT IV KINEMATICS AND PATH PLANNING**

**9**

Solution of inverse kinematics problem – multiple solution jacobian work envelop – hill climbing techniques – robot programming languages

### **UNIT V CASE STUDIES**

**9**

Multiple robots – machine interface – robots in manufacturing and non- manufacturing applications – robot cell design – selection of robot.

**TOTAL : 45 PERIODS**

**UNIT I INTRODUCTION****9**

Introduction - Need for quality - Evolution of quality - Definition of quality - Dimensions of manufacturing and service quality - Basic concepts of TQM - Definition of TQM – TQM Framework - Contributions of Deming, Juran and Crosby – Barriers to TQM.

**UNIT II TQM PRINCIPLES****9**

Leadership – Strategic quality planning, Quality statements - Customer focus – Customer orientation, Customer satisfaction, Customer complaints, Customer retention - Employee involvement – Motivation, Empowerment, Team and Teamwork, Recognition and Reward, Performance appraisal - Continuous process improvement – PDSA cycle, 5s, Kaizen - Supplier partnership – Partnering, Supplier selection, Supplier Rating.

**UNIT III TQM TOOLS & TECHNIQUES I****9**

The seven traditional tools of quality – New management tools – Six-sigma: Concepts, methodology, applications to manufacturing, service sector including IT – Bench marking – Reason to bench mark, Bench marking process – FMEA – Stages, Types.

**UNIT IV TQM TOOLS & TECHNIQUES II****9**

Quality circles – Quality Function Deployment (QFD) – Taguchi quality loss function – TPM – Concepts, improvement needs – Cost of Quality – Performance measures.

**UNIT V QUALITY SYSTEMS****9**

Need for ISO 9000- ISO 9000-2000 Quality System – Elements, Documentation, Quality auditing- QS 9000 – ISO 14000 – Concepts, Requirements and Benefits – Case studies of TQM implementation in manufacturing and service sectors including IT.

<b>EC2057</b>	<b>ADVANCED DIGITAL SIGNAL PROCESSING</b>	<b>L T P C</b>
		<b>3 0 0 3</b>

[Review of discrete-time signals and systems- DFT and FFT, Z-Transform, Digital Filters is recommended]

**AIM**

To provide adequate knowledge in Random signal processing.

**OBJECTIVES**

- i. Detail study of time averaging , ensemble averaging & study of power spectral density.
- ii. Detail study of parametric & non – parametric estimation
- iii. Detail study of adaptive filters & its applications
- iv. Introduction study of multivariable digital signal processing

**UNIT I DISCRETE RANDOM SIGNAL PROCESSING 9**

Discrete Random Processes- Ensemble averages, stationary processes, Autocorrelation and Auto covariance matrices. Parseval's Theorem, Wiener-Khintchine Relation- Power Spectral Density-Periodogram Spectral Factorization, Filtering random processes. Low Pass Filtering of White Noise. Parameter estimation: Bias and consistency.

**UNIT III SPECTRUM ESTIMATION 9**

Estimation of spectra from finite duration signals, Non-Parametric Methods-Correlation Method, Periodogram Estimator, Performance Analysis of Estimators -Unbiased, Consistent Estimators- Modified periodogram, Bartlett and Welch methods, Blackman – Tukey method. Parametric Methods - AR, MA, ARMA model based spectral estimation. Parameter Estimation -Yule-Walker equations, solutions using Durbin's algorithm

**UNIT IV LINEAR ESTIMATION AND PREDICTION 9**

Linear prediction- Forward and backward predictions, Solutions of the Normal equations- Levinson-Durbin algorithms. Least mean squared error criterion -Wiener filter for filtering and prediction , FIR Wiener filter and Wiener IIR filters ,Discrete Kalman filter

**UNIT V ADAPTIVE FILTERS 9**

FIR adaptive filters -adaptive filter based on steepest descent method-Widrow-Hoff LMS adaptive algorithm, Normalized LMS. Adaptive channel equalization-Adaptive echo cancellation-Adaptive noise cancellation- Adaptive recursive filters (IIR). RLS adaptive filters-Exponentially weighted RLS-sliding window RLS.

**UNIT V MULTIRATE DIGITAL SIGNAL PROCESSING 9**

Mathematical description of change of sampling rate - Interpolation and Decimation , Decimation by an integer factor - Interpolation by an integer factor, Sampling rate conversion by a rational factor, Filter implementation for sampling rate conversion- direct form FIR structures, Polyphase filter structures, time-variant structures. Multistage implementation of multirate system. Application to sub band coding - Wavelet transform and filter bank implementation of wavelet expansion of signals.
